

ExeQuantum and CyberWaze Partner to Accelerate Quantum Readiness Across the Middle East

ExeQuantum and CyberWaze unite to deliver post-quantum encryption to the Middle East, supporting Vision 2030 and critical sector resilience

DUBAI, UNITED ARAB EMIRATES, June 17, 2025 /EINPresswire.com/ -- As the quantum era approaches, the urgency to adopt post-quantum cryptography (PQC) has become a regional priority across the Middle East. [ExeQuantum](#), Australia's leading PQC provider, has formally partnered with [CyberWaze](#), a pioneering, UAE-based, cybersecurity firm, to deliver enterprise-grade, quantum-resistant encryption solutions across banking, healthcare, critical infrastructure, and beyond.

CyberWaze and ExeQuantum partner to bring post-quantum security to the Middle East across banking, healthcare, and critical infrastructure.

This strategic partnership comes at a crucial time. With regional initiatives like Saudi Vision 2030 and the UAE's National Cybersecurity Strategy, there is a clear emphasis on preparing public and private sectors for technological transformation, including digital resilience in the face of quantum computing threats.

“

Post-quantum readiness isn't a future problem, it's a present-day priority for any region serious about long-term digital sovereignty.”

Samuel Tseitkin, Founder & CEO, ExeQuantum

PQC readiness is no longer optional. Gartner has warned that organizations must begin PQC migration before 2029 or face material risk. The Australian government has set a firm 2030 phase-out for classical cryptography in critical systems. Many Middle Eastern governments are beginning

to follow suit, recognizing that data encrypted today can be harvested and decrypted later by quantum computers, a threat known as "store now, decrypt later."

“Quantum computing may still be evolving, but adversaries aren’t waiting. Governments and enterprises need a head start,” said Samuel Tseitkin, Founder & CEO of ExeQuantum. “Partnering with CyberWaze gives us the regional reach and cultural insight to make that head start possible in the Middle East.”

CyberWaze brings a strong track record of cybersecurity deployments across the UAE and Gulf Cooperation Council (GCC) countries. With their local offices and deep understanding of the regulatory landscape, CyberWaze is well-positioned to deliver ExeQuantum’s post-quantum capabilities where they matter most:

- Banking & Finance: Replacing aging TLS systems and securing payment rails
- Healthcare: Protecting electronic health records and genomic data from future quantum attacks
- Critical Infrastructure: Safeguarding SCADA and IoT systems in energy, transport, and water utilities
- Government Agencies: Enabling sovereign control over post-quantum key management

“Quantum resilience must start now, not later,” added Ali Muhammad, CEO of CyberWaze. “With ExeQuantum’s proven API-based solutions and real-world deployments, we can provide clients with cryptographic agility, auditability, and future-proof security.”

REAL DEPLOYMENTS. GLOBAL LEADERSHIP.

ExeQuantum’s post-quantum cryptographic engine is already deployed in production across a range of industries in Australia and beyond. From securing telemetry in manufacturing environments to future-proofing API infrastructure for fintechs and banks, ExeQuantum leads with execution, not just theory.

Key advantages include:

- API-first delivery for rapid, sustainable integration
- Hybrid algorithms combining post-quantum and classical cryptography
- On-premise and cloud options for different latency and compliance needs
- Real-time key rotation and end-to-end encryption

Through this partnership, CyberWaze will offer localized support, deployment consultation, and managed services powered by ExeQuantum’s core cryptographic platform.

ABOUT EXEQUANTUM

ExeQuantum is a global cybersecurity company specializing in post-quantum cryptography. Its flagship PQaaS (Post-Quantum Cryptography as a Service) platform enables developers and enterprises to integrate quantum-safe encryption via a plug-and-play API. With deployments across Australia, Europe, and now the Middle East, ExeQuantum is at the forefront of protecting data in a quantum future.

ABOUT CYBERWAZE

CyberWaze is a leading cybersecurity solutions provider based in the UAE, offering consulting, threat management, and security architecture services for enterprises and governments across the GCC. With a mission to empower regional digital resilience, CyberWaze partners with cutting-edge global firms to bring the world's best technologies to the Middle East.
