

Global Insulin Infusion Pump Market Set For \$10.31 Growth, Reaching 10.2% Billion By 2029

The Business Research Company's Insulin Infusion Pump Global Market Report 2025 – Market Size, Trends, And Global Forecast 2025-2034

LONDON, GREATER LONDON, UNITED KINGDOM, June 17, 2025

/EINPresswire.com/ -- What Is The Growth Trajectory Of The [Insulin Infusion Pump Market](#)?

The Business
Research Company

The Business Research Company

The rise of diabetes and increasing obesity, combined with growing demand for integrated systems designed to aid in efficient diabetes care, has fueled the rapid growth of the insulin infusion pump market globally. This healthcare technology, which aids in the precision delivery

of insulin doses to maintain stable blood glucose levels, accounted for a \$6.33 billion market in 2024 and is anticipated to jump to \$6.99 billion in 2025 with a compound annual growth rate CAGR of 10.4%. The increase is understandable with the concerning growth of lifestyle-related diseases, especially amongst sedentary populations with poor dietary habits.

How Will The Insulin Infusion Pump Market Expand In The Coming Years?

The insulin infusion pump market is expected to further boom in the future with projections suggesting a jump to

\$10.31 billion by 2029, riding a CAGR of 10.2%. This growth is fuelled by advancements in healthcare technology which is now expanding access to telehealth services and personalized medicine. The increasing cases of chronic diseases and healthcare expenditure, as well as growing awareness amongst both the physicians and patients, are also key contributors to this forecast. Trends to watch out for include the integration of artificial intelligence AI and machine learning, wireless connectivity, pump miniaturization, and wearable devices.

What Factors Are Accelerating The Insulin Infusion Pump Market Growth?

Undoubtedly, the burgeoning diabetes crisis is a key driver for the insulin infusion pump market. As it becomes more and more common for individuals to live sedentary lifestyles with poor dietary habits, obesity, insulin resistance, and higher rates of type 2 diabetes are inevitable results. Insulin infusion pumps have thus become a vital device in diabetes management, offering the convenience of maintaining stable blood glucose levels without the need for frequent injections. This improved overall diabetes care adds to its demand. For example, in June 2024, according to the National Health Service, a UK-based government department, the diagnosis of non-diabetic hyperglycemia or pre-diabetes in individuals registered with a general practitioner increased by 18% from 2022 to 2023, reaching 3,615,330 cases from 3,065,825.
