# Tobi's free eBook helps NEMT providers avoid five costly tech mistakes as they scale

HUDSON, OH, UNITED STATES, June 18, 2025 /EINPresswire.com/ -- Tobi, a leading provider of non-emergency medical transportation (NEMT) operations and dispatch software, launched a new e-book: "Top 5 Tech Mistakes Growing NEMT Companies Make and How to Fix Them." This practical, tech-forward guide is designed to help ambitious fleet owners scale their operations successfully with innovative, proven technology.

The guide explores five of the most common challenges faced by growing NEMT providers—from manual dispatching to complex compliance requirements. It provides actionable solutions backed by technology designed specifically for NEMT workflows.

"The right technology doesn't just support growth; it accelerates it," said Yasir Drabu, co-founder of Tobi. "Too many promising NEMT companies try to build out their businesses on outdated processes, which can hold them back."

The eBook highlights five key areas where growing businesses can improve operations through intelligently programmed software, including:

1. Automating dispatch workflows
2. Optimizing routes to reduce costs and delays
3. Tracking vehicles and drivers in real time
4. Making informed decisions with built-in reporting
5. Embedding compliance into daily operations

Instead of pointing out errors, the guide encourages providers to identify areas for optimization and presents tools that can help them scale confidently.

"The fast-paced NEMT industry demands advanced solutions that stay in step with growth," Drabu said. "This guide helps providers identify areas of improvement, implement tools that fit

their business, and take control of their futures."

The guide also offers a self-assessment checklist. It introduces how Tobi's integrated [NEMT software](#) simplifies everything from scheduling to reporting, freeing providers to focus on growth and service quality.
