

# Computer Recycling Launches Specialized Solar Panel Recycling Services

*Now offering live-load pickup services for solar panels, solar batteries, and e-waste from solar equipment*

PHILADELPHIA, PA, UNITED STATES, July 2, 2025 /EINPresswire.com/ -- As solar energy adoption continues to surge across the country, the question of what to do with aging or damaged solar panels has become increasingly urgent. In response to this growing challenge, Computer Recycling is proud to announce its dedicated [Solar Panel Recycling Services](#), designed to help businesses, municipalities, and institutions safely and responsibly dispose of end-of-life photovoltaic (PV) equipment.

With millions of solar panels expected to reach the end of their usable life over the next decade, Computer Recycling's new service aims to reduce the environmental impact of solar waste by diverting materials from landfills and ensuring hazardous components are handled in compliance with regulatory standards.

Solar Panels Waiting for Recycling

"Solar energy is a powerful step toward a cleaner future—but it's critical that we also plan for the full lifecycle of that technology," said a spokesperson for Computer Recycling. "Our [solar panel recycling program](#) gives clients a simple, safe, and eco-friendly way to retire aging solar assets without compromising sustainability goals."

Computer Recycling accepts a wide variety of PV equipment, including:

Crystalline silicon and thin-film solar panels

Damaged, defective, or obsolete units

Solar modules from residential, commercial, and utility-scale projects

Racking, inverters, and associated [e-waste from solar installations](#)

The company's process involves manual disassembly and material separation, allowing for the recovery of materials such as aluminum, , silicon, and copper. These recovered materials are then reintroduced into manufacturing streams, supporting circular economy practices and reducing the need for new resource extraction.

Ideal for:

Solar developers and contractors decommissioning aging systems

Commercial building owners upgrading rooftop installations

Municipal and utility providers managing solar infrastructure lifecycles

Recycling coordinators looking for compliant disposal options

As part of its commitment to sustainability and data security, Computer Recycling also offers documentation upon request and ensures compliance with all relevant environmental regulations, making it easier for clients to meet internal and external sustainability standards.

The solar panel recycling service complements the company's broader suite of electronics and IT asset disposition services, offering organizations a one-stop solution for managing outdated or damaged technology in a responsible and efficient way.

#### About Computer Recycling

Computer Recycling is a full-service electronics recycling provider offering secure, sustainable, and convenient solutions for organizations across a wide range of industries. From IT equipment and appliances to solar panels and data-bearing devices, the company helps clients responsibly dispose of outdated technology while minimizing environmental impact.
