Artificio launches first AI Document Chat to process files up to 500MB via natural language—no tech skills needed

Artificio's Breakthrough Technology Maintains Complete Context Across Thousands of Pages, Transforming Enterprise Document Analysis and Decision-Making

Chat with documents backed by AI

IRVINE, CA, UNITED STATES, June 23, 2025 /EINPresswire.com/ -- Artificio Products Inc., a leading innovator in AI-driven business automation, has announced the launch of Document Chat, the industry's first AI platform capable of understanding and processing documents as large as 500MB through natural conversation. This breakthrough enables organizations to seamlessly interact with massive files—such as annual reports, legal contracts, technical manuals, and research publications—without requiring any technical expertise.
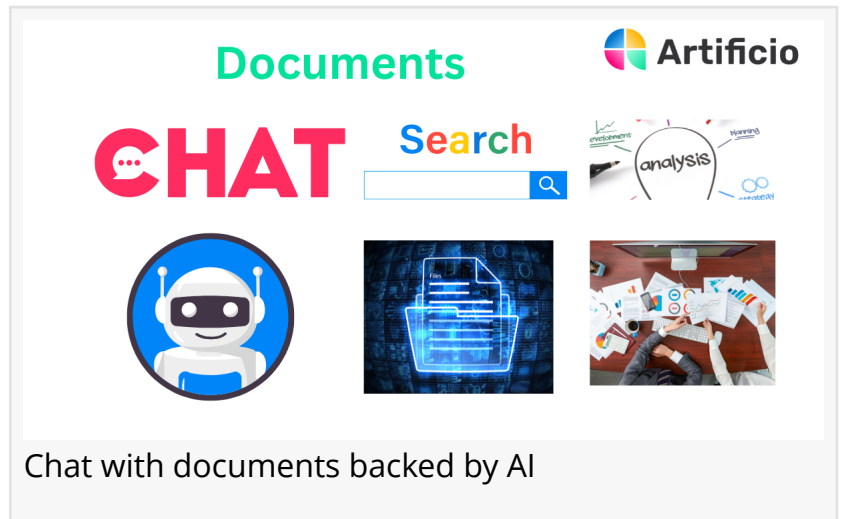

> Document Chat is a breakthrough in enterprise data use—processing files up to 500MB while keeping full context to turn large documents into intelligent, searchable knowledge sources."
>
> *Lal Singh, Founder and CEO of Artificio*

This next-generation document processing solution represents a paradigm shift in enterprise data interaction. By preserving the semantic relationships and contextual continuity across entire documents, Document Chat eliminates the fragmentation problems that plague legacy document chat interfaces, empowering users with instant, intelligent insights from thousands of pages in seconds.

"Document Chat represents a fundamental shift in how enterprises handle their most critical information assets," said Lal Singh, CEO and Founder of Artificio Products Inc.

"Unlike existing solutions that struggle with small files, our platform maintains complete context across thousands of pages, transforming annual reports, regulatory filings, and research publications into interactive knowledge bases. This breakthrough eliminates the need to

fragment large documents, ensuring accurate and contextually relevant responses for complex business analysis."

Solving Enterprise-Wide Document Processing Challenges
In today's data-intensive business environments, organizations frequently deal with voluminous documents that hold critical insights. However, traditional document chat platforms are constrained by file size limits, often capped below 50MB, making it nearly impossible to interact with full-length documents without splitting them up. This practice results in:

1) Loss of cross-references

2) Disconnected data interpretation

3) Inconsistent context

4) Increased manual effort

Artificio's Document Chat solution eliminates these roadblocks. Enterprises can now upload and interact with full-scale documents—up to 500MB—while retaining complete semantic structure, data relationships, and continuity across sections.

Key Features and Capabilities
Artificio's Document Chat combines advanced natural language processing (NLP), contextual AI, and a user-centric design to offer an intuitive and intelligent document experience. Key capabilities include:
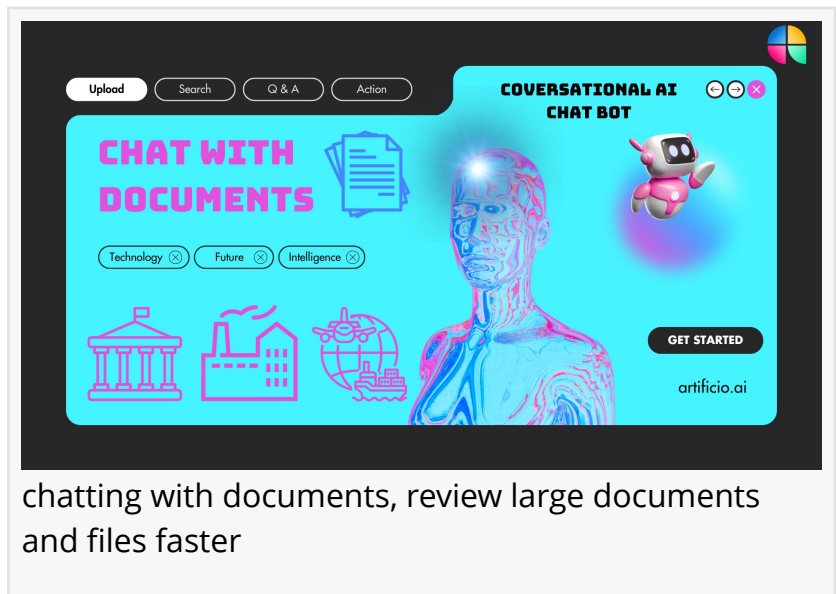

1) Massive Document Handling
Seamlessly process files up to 500MB, ideal for handling thousands of pages in a single conversation without file splitting.

2) Preserved Semantic Integrity
Maintain structural relationships between references, sections, tables, and annotations—crucial for documents like legal contracts, financial statements, and product manuals.

3) Instant Summaries and Q&A

Extract key insights, generate contextual summaries, or ask specific questions—without needing any programming or querying knowledge.

4) Context-Aware Responses
Deliver answers that reflect a deep understanding of the entire document, not just isolated paragraphs or keywords.

5) Secure, Compliant Infrastructure
Built on Artificio's enterprise-grade, privacy-first infrastructure, the platform is fully compliant with ISO 27001, SOC 2 Type 2, HIPAA, and GDPR standards.

Real-World Use Cases Across Industries
Document Chat is purpose-built to meet the rigorous demands of various sectors. It can revolutionize operations across:

1) Legal: Instantly analyze contracts, perform clause comparisons, and summarize litigation history.
2) Finance: Explore due diligence reports, regulatory filings, and performance audits with complete accuracy.
3) Healthcare: Navigate large-scale research data, clinical trials, patient studies, and compliance forms.
4) Manufacturing: Interact with operational manuals, technical blueprints, and global compliance documentation.
5) Public Sector: Understand policy documents, RFPs, and regulatory guidelines across multiple jurisdictions.

Integration and Accessibility
Document Chat seamlessly integrates with Artificio's broader intelligent automation platform and supports a no-code interface, making it accessible to professionals across business, operations, legal, finance, and compliance functions.

It connects effortlessly with leading enterprise platforms and document repositories, including:

i) SAP
ii) Oracle
iii) QuickBooks
iv) SharePoint
v) Google Drive
vi) Dropbox
vii) Sales force
viii) WhatsApp

And 100+ more via Artificio's native connectors

This ensures that data remains in sync across systems while empowering users to converse naturally with their document repositories, transforming previously static data into dynamic business intelligence.

Why It Matters
The ability to interact with large-scale documents through natural conversation brings a major productivity leap for organizations:

Reduces research and analysis time by over 70%
Improves decision-making accuracy
Eliminates the need for costly technical intervention
Increases operational agility and response time
Democratizes access to complex data

With Document Chat, businesses gain strategic agility by unlocking knowledge trapped in dense, underutilized documents.

Availability and Free Trial
Document Chat is now available on Artificio's secure AI platform at https://artificio.ai/
To celebrate the launch, Artificio is offering a 30-day free trial for enterprises to explore the full capabilities of large-scale document interaction and experience firsthand the power of AI-driven document automation.

About Artificio Products Inc.
Artificio Products Inc. is an industry-leading provider of AI-powered business automation solutions, helping organizations eliminate manual data entry and streamline operations through intelligent digital transformation.

With a strong foundation in AI, machine learning, and cognitive computing, Artificio's mission is to make powerful AI tools accessible to organizations of all sizes—without requiring complex infrastructure or technical know-how.

Artificio's suite of solutions supports enterprise-grade document processing, automation, and analytics, with clients ranging from SMBs to Fortune 500 companies across industries such as:

Supply Chain & Logistics

Manufacturing

Financial Services

Healthcare

Retail & Consumer Goods

Public Sector

The company is proudly ISO 27001, SOC 2 Type 2, HIPAA, and GDPR compliant, upholding the highest standards in data privacy and security.
