To take advantage of opportunities, [The Business Research Company](#) suggests that microencapsulation companies enhance offerings:

What Is Microencapsulation: Market Overview?

Microencapsulation is a process in which tiny particles or droplets are surrounded by a coating or embedded within a matrix to form small capsules. These capsules can range in size from a few micrometers to a few millimeters and contain active substances such as drugs, fragrances, oils, enzymes, or other ingredients. The main goal of microencapsulation is to protect the core material and control its release under specific conditions. This enhances the stability, effectiveness, and usability of the active substance.

The microencapsulation market consists of sales of microencapsulation by entities (organizations, sole traders and partnerships) that are designed to protect core materials, control their release, enhance stability and improve handling and delivery across various applications. Microencapsulation plays a vital role in industries such as pharmaceuticals, food and beverages, agriculture, personal care and household products
