

Hard Drive Degausser Market Strategic Plan for Positive Growth by 2032

Hard Drive Degausser Market Estimated to Experience a Hike in Growth By 2032

WILMINGTON, DE, UNITED STATES, June 26, 2025 /EINPresswire.com/ -- Allied Market Research published a report, titled, "Hard Drive Degausser Market by Type (Coil Degaussers, Capacitive Discharge Degaussers and Permanent Magnet Degaussers), and Application (Defense and Government, Financial Company, Hospital, Radio/TV/Broadcasting, Data Storage Company and Others): Global Opportunity Analysis and Industry Forecast, 2024-2032". According to the report, the hard drive degausser market was valued at \$0.1 billion in 2023 and is estimated to reach \$0.2 billion by 2032, growing at a CAGR of 7.8% from 2024 to 2032.

Hard Drive Degausser Market

“

The hard drive degausser market grows due to data security needs, strict regulations, tech advances, and rising demand for secure data erasure solutions.”

Allied Market Research

In this rapidly evolving digital age, the need to securely erase digital information has become essential. Hard drive degaussers have emerged as powerful tools in this current era that have the potential to prevent data breaches and unauthorized access. They are devices that eliminate data from magnetic storage media such as hard drives and tapes. In conventional data wiping methods, the pieces of data were merely overwritten. However, degaussers employ magnetic fields to disarrange data on the storage medium, making the data irretrievable.

Understanding popular hard drive degaussers

There are three types of degaussing devices based on how they generate the magnetic field. Coil

degaussers have gained immense popularity in this field. They comprise a copper wire coiled around a steel core to generate a powerful electromagnetic field through varying currents.

On the other hand, capacitive discharge degaussers mainly function by storing electric power and later releasing it to create a powerful electromagnetic pulse. They are also called pulsed degaussers. They help destroy data on magnetic storage mediums by demagnetizing them. Another popular form is permanent magnet degaussers that use rare-earth magnets to generate extremely strong magnetic fields. The best thing about these devices is their portability. This makes them suitable for various field operations.

How are hard drive degaussers ensuring data security across healthcare, finance, and defense?

Nowadays, financial institutions have become the major users who widely utilize hard drive degaussers as they deal with highly sensitive data daily. The UK government has mandated certified data destruction methods in financial companies to boost compliance with GDPR (General Data Protection Regulation).

Moreover, several defense and government agencies handling classified data require robust data destruction methods to prevent unauthorized access. Degaussing is often a preventive measure for the agencies before making physical destruction of sensitive data.

These devices are also utilized in e-waste management as a part of ethical e-waste disposal practices. They are deployed to ensure that there are no chances to recover personal information before the recycling process of electronic devices. Additionally, in the healthcare sector, organizations are making use of degaussers to comply with HIPAA (Health Insurance Portability and Accountability Act) regulations. With this initiative, healthcare institutions ensure that patient information is securely destroyed while disposing of old equipment.

These potential use cases of these devices across various sectors are expected to boost the growth of the hard drive degausser market in the coming years. According to Allied Market Research, the industry is anticipated to exhibit a CAGR of 7.8% from 2024 to 2032.

Advances in hard drive degaussers revolutionizing effective data destruction

In the past few years, the continuous advancements in degaussing technology have enhanced the performance of these devices. Modern degaussers have started utilizing high-capacity magnetic fields to erase data completely and quickly. For example, Piston Technologies, a data destruction company, has developed devices that combine degaussing with physical destruction methods, such as crushing. This approach enhances the process of data sanitization. Moreover, these days, many leading manufacturers have started incorporating multiple data

destruction methods such as combining degaussing with shredding or crushing techniques with hard drive degaussers. These advances help erase data permanently and reduce the chances of retrieving data physically.

Nonetheless, remarkable product development by industry leaders has brought new opportunities across the industry. For instance, in October 2024, VS Security Products Ltd., a leading provider of data security solutions, launched its new product, namely, V91 HDD Max, a manual hard drive degausser. It is a second-generation powerful degaussing device for hard drive destruction, specially designed for the budget-friendly and complete erasure of sensitive information from high-handed hard drives. The device has a 7000 Gauss field that enables complete data erasure within 12 seconds.

The rapid advancements in degaussing technology have offered promising data security solutions across various industries. Moreover, the increasing demand for portable and high-efficiency degaussers across modern businesses is expected to create wide growth opportunities for the industry in the coming years.

About Us:

Allied Market Research is a top provider of market intelligence that offers reports from leading technology publishers. Our in-depth market assessments in our research reports take into account significant technological advancements in the sector. In addition to other areas of expertise, AMR focuses on the analysis of high-tech systems and advanced production systems. We have a team of experts who compile thorough research reports and actively advise leading businesses to enhance their current procedures. Our experts have a wealth of knowledge on the topics they cover. Also, they use a variety of tools and techniques when gathering and analyzing data, including patented data sources.
