

CloudIBN Fortifies US Cloud Environments with Targeted VAPT Testing Services

CloudIBN strengthens U.S. cloud security with specialized VAPT testing services, ensuring robust protection against vulnerabilities.

MAIMI, FL, UNITED STATES, June 27, 2025 /EINPresswire.com/ -- As cloud adoption accelerates across the United States, CloudIBN, a leading global provider of managed security and compliance solutions, announces the official launch of its Targeted Cloud Vulnerability Assessment and Penetration Testing (VA&PT) Services. These tailored VAPT Testing Services are purpose-built for businesses leveraging Amazon Web Services (AWS), Microsoft Azure, Google Cloud Platform (GCP), and hybrid environments, empowering enterprises to proactively secure their cloud infrastructure and meet growing compliance demands.

CloudIBN - VAPT Testing Services

With cyberattacks on cloud resources increasing year over year, CloudIBN's VAPT Security Services are a timely solution for IT teams seeking to strengthen resilience, minimize risk, and ensure operational continuity in an increasingly connected world.

Cloud Adoption: Opportunities and Risks

From digital banking and logistics platforms to government operations and remote healthcare delivery, the cloud is now the default architecture for innovation. However, this transformation has created new security challenges:

1. Misconfigured storage buckets exposing sensitive files
2. Over-permissioned IAM roles leading to privilege escalation
3. Public-facing APIs open to exploitation

4. Lack of multi-factor authentication (MFA) on admin accounts

Unsecured CI/CD pipelines

Even mature enterprises often lack complete visibility into their attack surface, and native cloud security tools are not always sufficient. CloudIBN's Cloud VA&PT Services bridge this critical gap by simulating real-world attacks on your cloud environment and helping you close the vulnerabilities before threat actors can exploit them.

What Are VA & PT Services in a Cloud Context?

Vulnerability Assessment and Penetration Testing (VAPT) in the cloud goes beyond basic vulnerability scanning. It involves:

1. Identifying misconfigurations, weaknesses, and exposures across IaaS, PaaS, and SaaS components.
2. Simulating internal and external attack vectors through ethical penetration testing.
3. Reporting security gaps and suggesting prioritized remediation strategies based on severity and impact.

With CloudIBN's cloud-specific VA & PT Services, clients get a complete view of security across their virtual machines, APIs, containers, identity policies, and application services.

Is your cloud environment as secure as you think? Schedule a cloud security risk audit with CloudIBN today: <https://www.cloudibn.com/contact/>

Our Methodology: How Cloud VAPT Works

CloudIBN follows a six-stage methodology adapted specifically for cloud environments:

1. Discovery & Asset Mapping

We begin by identifying all cloud resources and configurations—public IPs, endpoints, storage, identity policies, and workloads.

2. Configuration Review

Security settings are benchmarked against CIS standards and cloud-native security best practices.

3. Automated Scanning

Use leading tools like ScoutSuite, Prowler, AWS Inspector, and Azure Security Center to detect misconfigurations and vulnerabilities.

Manual Penetration Testing

Experienced ethical hackers simulate real attacks:

1. Cloud privilege escalation
2. Token theft & reuse
3. S3 bucket enumeration
4. Exploiting unpatched containers
5. Cross-account access abuse
6. Exploitation & Risk Evaluation

We categorise and report findings using CVSS scores, business context, and potential blast

radius.

6. Reporting & Remediation Guidance

Detailed reports include executive summaries, technical POCs, and secure configuration recommendations. We also validate fixes through re-testing.

Cloud Platforms Covered

Our Cloud VA&PT Services support:

1. Amazon Web Services (AWS) – EC2, S3, IAM, Lambda, RDS, Route 53
2. Microsoft Azure – App Services, Azure SQL, Key Vaults, NSGs, AD
3. Google Cloud Platform (GCP) – Compute Engine, Cloud Storage, IAM, Cloud Functions
4. Hybrid & Multi-Cloud Setups – Interconnected environments using tools.

Why Cloud VA & PT Services Are Now Critical

1. 75% of US companies experienced a cloud-related security incident in the last 12 months.
2. Cloud misconfiguration accounts for 45% of breaches in cloud environments.
3. Compliance mandates such as HIPAA, PCI DSS, ISO 27001, and SOC 2 now require routine cloud infrastructure testing.

CloudIBN's VA & PT Services help organizations go beyond tick-box compliance. We focus on meaningful security outcomes that protect both data and reputation.

Cloud security isn't optional—it's essential. Talk to our VAPT Security Services team about your cloud risk posture: <https://www.cloudibn.com/lp/pr-vapt-services-in-usa/>

Why Choose CloudIBN?

Here's what makes CloudIBN the partner of choice for cloud-native and cloud-migrated enterprises:

1. Cloud-Certified Experts: Our teams include AWS Certified Security Specialists, Azure Security Engineers, and OSCP-credentialed ethical hackers.
2. Customized Testing Models: We tailor every engagement based on your architecture, from serverless to containerized deployments.
3. Integration-3Friendly: CI/CD pipelines, GitHub Actions, Kubernetes clusters—we test across your entire DevOps lifecycle.
4. Compliance-Driven Testing: Our testing procedures align with NIST 800-53, OWASP Cloud Top 10, CSA STAR, and major audit requirements.
5. Fast Turnaround: Get initial findings within days, with full reports delivered within 7–10 business days.

Secure the Cloud, Secure the Business

Cloud environments deliver agility and scale—but without proper security, they also expand the threat surface dramatically. CloudIBN's Targeted Cloud [VAPT Audit Services](#) are the ideal solution for modern businesses seeking to proactively secure their infrastructure, comply with

regulations, and gain visibility into their true risk exposure. Whether you're a cloud-native startup or a Fortune 500 migrating legacy apps, CloudIBN's VAPT Security Services help you stay secure, compliant, and confident in the cloud.

About CloudIBN

Founded in 1999, CloudIBN is an ISO 27001:2013, ISO 9001:2015 certified IT and Cybersecurity services provider. As a Microsoft Cloud Managed Services Partner, IBN specializes in VAPT, SIEM-SOAR consulting and deployment, cloud security, and compliance consulting. With a team of experienced lead auditors and cybersecurity specialists, IBN is committed to securing digital infrastructures worldwide
