

# Breast Cancer Epidemiology Report | In-Market Drugs, Treatment, Trends, Rising Incidence & Prevalence 2025-2035

*The report provides a detailed analysis of the current breast cancer marketed drugs and late-stage pipeline drugs.*

BROOKLYN, NY, UNITED STATES, June 28, 2025 /EINPresswire.com/ -- The breast cancer markets are expected to exhibit a CAGR of 5.35% across the top 7 (US, EU4, UK, and Japan) during 2025-2035. The increasing cases of mutations in genes that are involved in repairing damaged DNA and maintaining the stability of the cell's genetic material are primarily driving the market.

The rising awareness coupled with increased medical innovation the breast cancer market is projected to grow exponentially in 2025. While breast cancer continues to be one of the most prominent cancers amongst women, preemptive screening and newer treatment options are transforming the paradigm of care. The market is evolving towards more advanced targeted diagnostics and personalized medicine bolstered by digital health solutions. Widespread adoption of 3D mammography augmented by ultrasound adjuncts along with genetic testing for high-risk patients will bolster early detection opportunities. Identification of earlier stage tumors significantly enhances the probability of successful intervention in treating patients and improving overall healthcare outcomes. Additionally health systems are conducting active awareness drives recommending women commence routine screening from the age of forty years. The rising numbers of people diagnosed with breast cancer is a market growth driver. The population's advancing age, along with specific health habits such as obesity and reduced activity levels contribute to this fact. Additionally, cases are being reported and tracked more extensively, thus more women are being diagnosed and treated in a timely manner. With the increase in diagnosis rates comes an increased patient need for long-term therapy options as well as for reconstructive services.

Important changes are expected in 2025 regarding the treatment and diagnosis. Non-invasive liquid biopsy tests are available that monitor progression of diseases via circulating tumor DNA analysis through blood samples, making it possible to assess whether treatments are effective. This enables therapy optimization over time without repeated tissue biopsies. Concomitantly, PARP inhibitors, antibody-drug conjugates targeted to HER2-positive and triple-negative breast cancers are also gaining wider approval. The care patients receive is also improved thanks to digital health technologies. Tele-oncology appoints distant consultations; remote treatment scheduling as well as symptom monitoring is within the patient's control so long as data sharing is enabled alongside mobile monitoring apps for side effects and quality of life parameters. Delivery of therapeutic doses is further advanced through AI systems which radiate healthy tissues while optimizing dose delivery at minimal radiation exposure levels

This report also provides a detailed analysis of the current breast cancer marketed drugs and late-stage pipeline drugs.

#### In-Market Drugs:

Drug Overview  
Mechanism of Action  
Regulatory Status  
Clinical Trial Results  
Drug Uptake and Market Performance

#### Late-Stage Pipeline Drugs:

Drug overview  
Mechanism of action  
Regulatory status  
Clinical trial results  
Drug uptake and market performance

#### Competitive Landscape with key players:

The competitive landscape of the breast cancer market has been studied in the report with the detailed profiles of the key players operating in the market.

1. AstraZeneca Pharmaceuticals
2. Pfizer
3. Eli Lilly and Company
4. Novartis Pharmaceuticals

5. Genentech, Inc
6. BriaCell Therapeutics Corporation
7. Daiichi Sankyo, Inc.
8. Merck/Seagen
9. Merck Sharp & Dohme LLC
10. Loxo Oncology

Buy Full Report with TOC: [Breast Cancer Epidemiology Report | In-Market Drugs, Treatment, Trends, Rising Incidence & Prevalence 2025-2035](#)

7 Major Countries Covered:

United States  
Germany  
France  
United Kingdom  
Italy  
Spain  
Japan

Analysis Covered Across Each Country:

Historical, current, and future epidemiology scenario  
Historical, current, and future performance of the breast cancer market  
Historical, current, and future performance of various therapeutic categories in the market  
Sales of various drugs across the breast cancer market  
Reimbursement scenario in the market  
In-market and pipeline drugs

If you need specific information that is not currently within the scope of the report, we will provide it to you as a part of the customization.
