

Minimize Your Attack Surface: CloudIBN's VAPT Services for US Digital Platforms

CloudIBN's VAPT services help U.S. digital platforms minimize attack surfaces and strengthen cybersecurity posture.

MAIMI, FL, UNITED STATES, July 1, 2025 /EINPresswire.com/ -- As cyber threats increase in volume and sophistication, the attack surface for organizations continues to expand—encompassing web apps, cloud systems, APIs, mobile platforms, and third-party integrations. CloudIBN, a global security and cloud consultancy, announces the launch of its comprehensive VAPT Services in the United States, purpose-built to help digital businesses discover and minimize their exposure to cyber risk before attackers strike.

With threat actors exploiting everything from unpatched software and

misconfigured servers to shadow IT and publicly exposed assets, reducing the attack surface has become a top priority for US businesses in 2025. CloudIBN's Vulnerability Assessment and Penetration Testing (VAPT) Services provide a structured, scalable, and strategic approach to uncovering weaknesses across all digital platforms—ensuring organizations don't just react to threats, but prevent them altogether.

What is an Attack Surface—and Why It Matters

The “attack surface” refers to every point of interaction where an unauthorized user can attempt to enter or extract data from an organization's digital environment. In the modern enterprise, these points have multiplied dramatically due to:

1. Widespread cloud adoption (AWS, Azure, GCP)
2. Proliferation of APIs and microservices
3. Use of remote access and VPNs

CloudIBN - VAPT Services

4. Bring Your Own Device (BYOD) policies
5. Unsecured development and test environments
6. Third-party vendor integrations

Every component of your IT infrastructure is a potential entry point. CloudIBN's VA&PT Services are designed to identify, validate, and help eliminate these vulnerabilities, significantly reducing your attack surface—and with it, your risk.

Unsure how exposed your systems are? Schedule a VA & PT Services assessment with CloudIBN today: <https://www.cloudibn.com/contact/>

The CloudIBN Advantage: VA & PT Services That Go Deeper

Most organizations conduct periodic scans using automated tools. But this approach often leaves gaps that attackers are happy to exploit. CloudIBN takes a deeper, more human-centered approach, combining automation with skilled manual testing to simulate how a real-world adversary would breach your systems.

CloudIBN's VA & PT Services Cover:

Web Applications – OWASP Top 10 vulnerabilities, business logic flaws, session hijacking, insecure APIs

Cloud Infrastructure – Misconfigured S3 buckets, open ports, weak IAM policies, lack of encryption in GCP, AWS, and Azure environments

Mobile Applications – Insecure storage, improper platform usage, data leakage

Network Infrastructure – Internal and external assessments of open services, outdated protocols, DNS misconfigurations

Remote Access and VPNs – Credential brute force, MFA bypass, insecure tunneling

This holistic coverage allows CloudIBN to map your entire threat landscape, from internal services to public-facing endpoints.

How CloudIBN's VA&PT Works

The success of any VAPT engagement depends on process. CloudIBN follows a tested, transparent methodology that delivers value from Day 1.

1. Asset Discovery & Scoping

A collaborative session helps define what's in scope—public and private assets, domains, subdomains, cloud workloads, applications, etc.

2. Vulnerability Assessment

Using top-rated tools and threat intelligence, CloudIBN scans your environment for known issues including CVEs, misconfigurations, and default settings.

3. Manual Penetration Testing

Ethical hackers simulate real-world attacks to assess exploitability, lateral movement, data exfiltration, and privilege escalation scenarios.

Reporting and Risk Analysis

The result is a structured, actionable report with:

- Executive summary

- Technical vulnerability details
- Screenshots of exploit proof-of-concepts
- Prioritized risk ratings
- Remediation guidelines mapped to your environment

5. Remediation Assistance & Retesting

Once fixes are implemented, CloudIBN performs a retest to confirm effectiveness and advise on hardening strategies.

See what your automated tools are missing. Engage CloudIBN for full-scope VAPT today:

CloudIBN's VA & PT AUDIT Services: For When Compliance Matters

For many US organizations, minimizing attack surface is not just about risk mitigation—it's also a compliance obligation. CloudIBN extends its offering with VA& PT AUDIT Services that help businesses demonstrate alignment with key standards, including:

1. HIPAA – Safeguarding electronic protected health information (ePHI)
2. PCI DSS – Securing cardholder data and payment systems
3. SOC 2 Type II – Validating internal controls over customer data
4. ISO/IEC 27001 – Formalizing information security management practices
5. NIST & CMMC – Required for federal contractors and DoD supply chain participants

Each audit engagement includes mapping vulnerabilities to relevant controls, documenting remediation steps, and providing verification artifacts suitable for auditors and regulators.

Every additional application, endpoint, or API increases your potential attack surface. And every hour without full visibility increases your exposure to risk. CloudIBN's [VAPT Audit Services](#) provide the insight, precision, and assurance US organizations need to close security gaps before attackers find them. With a focus on deep analysis, real-world emulation, and business-aligned risk reduction, CloudIBN enables your organization to move beyond reactive defense and into a state of strategic security readiness. Minimizing your attack surface is no longer optional. It's an essential step toward protecting your systems, customers, and reputation.

About CloudIBN

Founded in 1999, CloudIBN is an ISO 27001:2013, ISO 9001:2015 certified IT and Cybersecurity services provider. As a Microsoft Cloud Managed Services Partner, IBN specialises in VAPT, SIEM-SOAR consulting and deployment, cloud security, and compliance consulting. With a team of experienced lead auditors and cybersecurity specialists, IBN is committed to securing digital infrastructures worldwide
