

ancora Software Launches Powerful New e-Invoicing Capabilities, Expanding Intelligent Document Processing Platform

ancora adds e-Invoicing to its IDP platform, enabling automated processing of XML and PDF invoices in a single, flexible, schema-agnostic workflow.

SAN DIEGO, CA, UNITED STATES, July 1, 2025 /EINPresswire.com/ -- ancora Software, a leading provider of Intelligent Document Processing (IDP) solutions, today announced the launch of new e-Invoicing capabilities in its

flagship IDP platform. This enhancement represents a strategic leap forward in automating accounts payable processes by enabling seamless, automated handling of structured digital invoices.

Intelligent Document Processing with a focus on Intelligent Document Classification and Advanced Data Capture

“

Our goal is to provide a truly flexible, future-ready solution that eliminates the complexity of format fragmentation.”

Noel Flynn, CEO of ancora Software, Inc.

As global business ecosystems continue to digitize financial operations, e-Invoicing — the structured digital exchange of invoices between suppliers and buyers — is becoming essential for efficient, accurate, and scalable invoice processing. ancora’s new capabilities empower users to process both traditional image and PDF invoices and a wide variety of XML-based e-Invoice formats within a single, unified workflow.

Strategic Fit and Goals

This enhancement is directly aligned with ancora’s mission to simplify and streamline document-driven processes. By supporting e-Invoicing formats without hardcoding specific schemas, ancora ensures organizations can remain agile and compliant as regional and industry standards evolve.

“Our goal is to provide a truly flexible, future-ready solution that eliminates the complexity of format fragmentation,” said Noel Flynn, CEO of ancora Software. “By enabling dynamic

configuration through XPath mapping, our users can rapidly adapt to any e-Invoicing standard — present or future — without code changes.”

Key Capabilities and Features

- XML and PDF with embedded XML Support: ancora can now ingest structured XML data or PDF files with embedded XML in the same pipeline as PDFs or scanned images. XML content is treated as a document input, making it compatible with downstream data capture modules. ancora can now streamline the e-invoices you are receiving from your suppliers and standardize it to the same output
- Unified Batch Processing: The system can automatically consume both XML files and regular image and PDF invoices, streamlining operations and reducing the need for manual sorting.
- Schema-Agnostic Design: No built-in assumptions about XML format. Instead, formats are identified and processed via configuration using XPath mappings, offering universal compatibility.
- Manual Plugin Distribution: To give customers full control over adoption, the e-Invoicing capability is delivered via optional, manually deployed plugins, making it ideal for phased rollouts or pilot testing.

Assumptions and Design Philosophy

In an ecosystem where no universal e-Invoicing standard exists, flexibility is paramount. ancora’s solution assumes a heterogeneous landscape and responds by abstracting format logic into configurable components. This allows customers to define how each invoice type is handled without relying on hardcoded rules — enabling fast response to changing compliance or partner requirements.

Looking Ahead

ancora’s commitment to intelligent automation continues to evolve in step with customer needs and market trends. These new e-Invoicing capabilities mark a significant milestone in building a platform that not only captures data, but understands and adapts to the way documents are structured and delivered in a digital-first economy.

About ancora Software, Inc.

ancora Software, Inc. is a pioneer in Intelligent Document Processing technology, transforming the way organizations handle their document-centric processes. With solutions that automate data capture, classification, and validation, ancora empowers businesses to increase efficiency, reduce costs, and minimize manual data entry across industries.
