expected to grow from \$1.89 billion in 2024 to \$2.1 billion in 2025, reflecting a compound annual growth rate CAGR of 11.0%. This growth can be attributed to factors such as escalating awareness of hospital-acquired infections, increasing demand for hygiene in healthcare settings, stringent regulations advocating infection control, a significant rise in hospital admissions, and an overall expansion in healthcare infrastructure. Other contributing factors include the increased use of reusable hospital furnishings, a surge in communicable diseases, the adoption of disposable medical products, the demand for cost-effective infection prevention measures, and the drive

towards hospital modernization initiatives.

What Is Its Annual Growth Rate?

The medical antibacterial curtain market size is poised for impressive growth in the coming years, projected to reach \$3.15 billion in 2029 at a CAGR of 10.8%. The anticipated growth can be credited to increase in surgical procedures, a growing aging population, government initiatives towards healthcare infrastructure, stricter infection control protocols, a growing preference for

disposable curtains, and demand for sustainable and recyclable materials.

What Is Driving The [Growth Of The Medical Antibacterial Curtain Market](#)?

How will the rising prevalence of healthcare-associated infections HAIs influence the global medical antibacterial curtain market? The rising occurrence of healthcare-associated infections HAIs, infections patients obtain while receiving treatment in a healthcare setting, is expected to accelerate the growth of this market. Extended hospital stays, which enhance exposure to infectious agents, drive the increase in healthcare-associated infections. Medical antibacterial curtains contribute significantly to reducing healthcare-associated infections by impeding the growth and spread of harmful bacteria on surfaces, thereby maintaining a cleaner and safer hospital environment. Data from the European Centre for Disease Prevention and Control reveals that in May 2024, 4.3 million patients annually acquired HAIs in 2022–2023, with 29.3% being respiratory infections.
