

Coronary Stents Market To Hit USD 14.91 Billion by 2032, Grow at CAGR of 7.6% From 2025 To 2032

Coronary Stents Market was Valued at USD 8.3 Bn. in 2024 and is expected to grow at CAGR of 7.6% from 2025 to 2032 Reaching nearly USD 14.91 Bn. by 2032

WILMINGTON, DE, UNITED STATES, July 2, 2025 /EINPresswire.com/ -- Stellar Market Research examines the growth rate of the [Coronary Stents Market](#) during the forecasted period 2025-2032

The Coronary Stents Market is projected to grow at a CAGR of approximately 7.6% over the forecast period. The Coronary Stents Market was valued at USD 8.3 billion in 2024 and is expected to reach USD 14.91 billion by 2032. The rise in heart issues fuels the growth of the coronary stents market. This rise is also due to new tech, less harsh methods, good paybacks, more money put into health, better knowledge, top-notch pictures, and growing new markets.

With every heartbeat, the coronary stents market powers progress in the fight against cardiovascular disease."

Dharati Raut

Coronary Stents Market Overview

The heart stent market is on the rise because more people have heart issues, more old people, and a want for small-scale surgery. New tech such as drug-releasing and self-dissolving stents pushes new ideas. Market growth has help from good tests, strong rules, and more health care in growing places. Main parts are drug-releasing, plain-metal,

and self-dissolving stents. Big users are hospitals and heart centers. With steady research and world health shifts, this market is set to keep growing in heart fixes.

Coronary Stents Market Dynamics

Drivers

Rising Prevalence of Cardiovascular Diseases (CVDs)

Cardiovascular diseases (CVDs), are the top reason people die all over the world. They are going up because more people live in cities, are getting old, and face health risks such as being overweight, high blood pressure, and sugar issues. Countries with average money are hit hardest. Signs point to even more cases by 2050. New ways to spot these diseases early and the wide issue of heart problems are making more people need stents, mainly in places with lots of risks, like South Asia and Latin America.

Shift to Minimally Invasive Procedures (PCI)

The move to less harsh PCI gives fast healing, less trouble, and a better life than open-heart surgery. New tech like robot-helped PCI, AI use, and better pictures make it more exact and safer. New studies prove PCI works even for very risky plaques. More and more people around the world, mostly in Asia-Pacific, can now get good, low-cost heart care.

Technological Advancements

Newer drug-eluting stents, made with things that break down over time, cut down on scar tissue in the heart. They are now used in more than 70% of heart cases. Better items like new mixes, thin supports, and small tech coatings make them safer and work better. New AI help and smart stents make things more exact. The latest clearings by the FDA and new smart parts help the market grow and get more users.

Restrain

High Procedure Costs

High prices for high-tech Coronary Stents, like those that send out drugs and those that break down in the body, make it hard for people in poor and mid-tier places to get them. In some spots like India, price limits cut down on how many are for sale. Payback rules often back less costly choices, causing uneven access. These money issues also hit local makers, possibly slowing new ideas and keeping top-notch, life-saving stents out of reach for many.

Innovations and Developments

Technological innovation is a key factor propelling the Coronary Stents Market forward. Notable

advancements include:

Advanced Drug-Eluting Stents (DES)

Nanoporous Surfaces: These let drugs get in without a polymer, with less risk and better control over release times.

Targeted Drug Delivery: Using tiny bits bound to special body-guard agents, these set-ups send the cell-growth-stopping drugs right to the growing muscle cells but not to the cell lining of blood paths. This makes the treatment hit just the right spots.

Coronary Stents Market Segmentation

By Product Type

By Product Type, the Coronary Stents Market is further segmented into Drug-Eluting Stents, Bare-Metal Stents, Bioresorbable Stents, and Covered Stent. Drug-Eluting Stents (DES) lead the heart stent field because they stop repeat blockage well, carry drugs well, and are used a lot in clinics. New things like breaking-down plastics and new DES make results better. Even with high prices and rule issues, DES use keeps growing. This growth comes from new stents coming out and more uses in heart and other main blood paths.

Coronary Stents Market Regional Insights

North America: North America is at the top of the heart stent market because of its high Cardiovascular disease rates, top-notch medical care, big device firms, strong pay-back, and constant research. Recent OKs from the FDA for stents that can dissolve and the use of new imaging tech push the market up even more.

Europe: Europe sits as the second-biggest player in the Coronary Stents field because of top-notch health care, high Cardiovascular disease rates, strict rules, and government help. Fresh ideas, such as new drug-lined stents and CE clearances, push growth, and the market is set to grow at a steady pace.

Asia-Pacific: Asia Pacific is third in the heart stent market because many people have heart issues. More and better health care, help from the government, local making of stents, and new tech such as stents that break down in the body help this growth. It makes steady rises and easier ways to get care.

Coronary Stents Market Competitive Landscape

The global and regional players in the Coronary Stents Market concentrate on developing and enhancing their capabilities, resulting in fierce competition. Notable players include:

Abbott Laboratories (U.S.)
Boston Scientific Corporation (U.S.)
Medtronic plc (Ireland, operates heavily in the U.S.)
C. R. Bard, Inc. (U.S.)
Cook Medical (U.S.)
BD (Becton, Dickinson and Company) (U.S.)
Stryker Corporation (U.S.)
Elixir Medical Corporation (U.S.)
InspireMD (U.S.)
Micell Technologies, Inc. (U.S.)

Summary

The global Stents Market for hearts is set to grow by 7.6% per year from 2025 to 2032, to hit USD 14.91 billion by 2032 from USD 8.3 billion in 2024. This rise is due to more heart issues, older folks, and the want for small cut-offs like PCI, with help from better drug-coated and melting stents. New tech, like AI help and better stuff, make the work safer and surer. Yet, the high cost of the work keeps it hard for poor and middle-level lands to access.

The market is split by the type of stent. Drug-eluting stents are on top because they stop restenosis well and give drugs better. By area, North America is in front because of top healthcare and strong R&D. Europe and Asia Pacific come next. They gain from better healthcare construction and help from the government. The market has a lot of competition. Big names like Abbott Laboratories, Boston Scientific, and Medtronic push new ideas and grow all over the world.

About Stellar Market Research:

Stellar Market Research is a multifaceted market research and consulting company with professionals from several industries. Some of the industries we cover include medical devices, pharmaceutical manufacturers, science and engineering, electronic components, industrial equipment, technology and communication, cars and automobiles, chemical products and substances, general merchandise, beverages, personal care, and automated systems. To mention a few, we provide market-verified industry estimations, technical trend analysis, crucial market research, strategic advice, competition analysis, production and demand analysis, and client impact studies.
