How Big Is The Global Osteomyelitis Market Expected To Grow?

The global osteomyelitis market has experienced consistent growth, with expectations for this trend to continue. Having grown from \$1.02 billion in 2024 to \$1.11 billion in 2025 at a compound annual growth rate CAGR of 9.1%, this growth in the historic period is driven by the increased use of bone grafts and regenerative medicine, rising healthcare expenditure, an uptick in the aging population, improved diagnostic techniques, and a spike in intravenous IV drug abuse.

What Is Driving The Growth In The Osteomyelitis Market?
The rising incidence of chronic conditions is expected to fuel [the growth of the osteomyelitis market](#). Chronic

conditions persist for months or years and often require ongoing management and care. Notably, the incidence of such conditions is rising due to the global population aging, which weakens the immune system and heightens vulnerability to long-term illnesses and infections. In particular, these chronic conditions increase the risk of osteomyelitis by weakening the immune system and impairing blood flow, especially in diseases such as diabetes and vascular disorders. They create an environment for infections to persist, increasing the likelihood of bone involvement and complicating recovery.
