Company*

What Is Its Annual Growth Rate?

In the coming years, further amplification in the telehealth and telemedicine market size is expectant. Plotting a course to reach an astounding \$324.94 billion by 2029 at a CAGR of 20.8%, this growth projection is influenced by an

aging global population, increasing prevalence of chronic diseases, the burgeoning expansion of 5G and internet of things IoT technologies, and a growing confidence in using digital tools among patients. In addition to these factors, rising government incentives further propel market growth. Major trends in the forecast period include integration of artificial intelligence AI and machine learning, expansion of remote patient monitoring, advancements in video conferencing technologies, blockchain for data security, and the use of cloud-based platforms.

What Driving Forces Are Behind The Telehealth And Telemedicine Market?

Key to the expansion of the telehealth and telemedicine market is the increasing penetration of smartphones. Smartphone penetration refers to the percentage of the population who own and use smartphones, an indicator of the widespread adoption and integration of mobile technology in daily life. This trend is mostly attributed to more affordable pricing and increased accessibility, which has made smartphones a viable option for a wider range of consumers. By providing convenient access to healthcare services remotely, smartphones have enabled real-time consultations, monitoring, and medical advisories.

For individuals in remote areas or with limited mobility, smartphones have revolutionized healthcare convenience and accessibility. According to the GSM Association, a UK-based non-profit organization, there were nearly 4.3 billion people 53% of the global population using their smartphones to access the internet as of October 2023, this figure reflecting an increase of 330 million people from 2022 to 2023. With approximately 80% of mobile internet users now sporting 4G or 5G smartphones, the surge in smartphone penetration is a significant driver of the telehealth and telemedicine market's growth.
