- The outbreak of the COVID-19 pandemic caused a significant decline in the growth of the global pediatric radiology market, due to the implementation of lockdown in many countries.
- The pharmaceutical industry faced challenges to focus on R&D activities, including the development of pediatric radiology. The entire healthcare industry focused on life-saving and COVID-19-related products during the pandemic.
- There were delays in product approvals and launches which further restricted the expansion of the market. Furthermore, most of the clinical trials were postponed to avoid the spread of infections, which slowed down the drug development process.

The report offers a detailed segmentation of the global pediatric radiology market based on type, application, end user, and region. The report provides an analysis of each segment and sub-segment with the help of tables and figures. This analysis helps market players, investors and new entrants in determining the sub-segments to be tapped on to achieve growth in the coming years.

Based on type, the magnetic resonance imaging (MRI) segment is expected to manifest the highest CAGR of 5.2% from 2022 to 2031. However, the others segment held the largest share in 2021, contributing to more than two-fifths of the global pediatric radiology market, and is likely to maintain its leadership status during the forecast period. The report also analyzes the ultrasound segment.

Based on application, the cardiology segment is estimated to witness the fastest CAGR of 5.7% during the forecast period. However, the others segment held the largest share in 2021, accounting for more than one-third of the global pediatric radiology market and would rule the roost through 2031. The report also provides an analysis of oncology, orthopedics, and other segments.
