What Is Driving The Growth Of The Preventive Vaccines Market?

The Business
Research Company

Preventive Vaccines Global Market Report 2025

One significant driving force of this market is the continually increasing prevalence of infectious diseases worldwide. Infectious diseases, caused by pathogenic microorganisms like bacteria, viruses, fungi, and parasites, can be transmitted from person to person or via the environment. Factors such as urbanization, global travel, and antimicrobial resistance amplify the spread and control of infections. Preventive vaccines help control these diseases by priming the immune system to recognize and fight pathogens even before infection occurs, reducing disease incidence and transmission. The Australian Institute of Health and Welfare reported that infectious diseases caused over 15,770 deaths in Australia in 2022, with lower respiratory infections accounting for a third of these non-notifiable disease deaths.
