

## WorkDone® AI Corporate Memory® Optimizes Order-to-Cash for Leading Cellular Manufacturer

LOS ANGELES, CA, UNITED STATES, July 22, 2025 /EINPresswire.com/ -- Canoga Perkins, a global manufacturer of leading edge high-performance networking solutions, has expanded its partnership with WorkDone® to deploy the company's AI platform across multiple mission-critical back-office operations. A WorkDone customer since 2021, Canoga Perkins is preparing for significant growth driven by its new SyncMetra® product line, which delivers next-generation timing and transport solutions for 5G and beyond.

With the growth of faster, more accurate, and more time-sensitive applications, including the pervasive impact of AI, there's an increasing demand for new networkers capable of

handling these advanced requirements. This is precisely where SyncMetra® excels. Canoga Perkins stands as an enabler for AI on the Edge, having created a cutting-edge product line that empowers organizations to build these advanced networks by providing the essential advanced switches. These innovations are fundamentally revolutionizing data transport – the crucial transfer of data between nodes. The networks Canoga Perkins enables range from private, high-demand environments for a single manufacturer to large-scale public infrastructures.

## Corporate Memory for Operational Excellence

To support this expansion, Canoga Perkins is installing WorkDone's Corporate Memory<sup>®</sup>, which observes work in real time, identifies best practices, and transforms that knowledge into intelligent automation to support human teams, ensuring operations run smoothly and

consistently even as a company scales or employees change.

"As we prepare for significant growth fueled by SyncMetra®, operational excellence has never been more critical," said Malik Arshad, CEO of Canoga Perkins. "WorkDone's Corporate Memory provides the data-driven insights and intelligent workflows we need to grow effectively, preserve institutional expertise, and deliver on the high-performance standards our customers expect."

Innovative Assessment Leads to Rapid ROI

Following a brief Order-to-Cash (O2C) assessment, WorkDone identified multiple opportunities to improve process transparency, efficiency, and operational health. The initial scope will create an agentic back office - a dynamic environment where AI agents and copilots collaborate with

The future of enterprise automation is about invisible systems that learn from people, retain knowledge, support humans and continuously optimize at scale."

Joseph Rogers

staff to share best practices, optimize back-office functions, and automate supply chain workflows. Additionally, Corporate Memory will enable Canoga Perkins to scale operations efficiently across functions such as forecasting, order processing, procurement, and logistics. Payback on the initial deployment is expected in less than six months.

"The future of AI in the enterprise isn't just about automation - it's about frictionless systems that learn, retain and improve knowledge, then operationalize it," said Joe Rogers, CEO of WorkDone Inc. "Our Corporate Memory

ensures critical real-world know-how stays alive and actionable, which drives continuous optimization."

Seamless Integration with Existing Systems

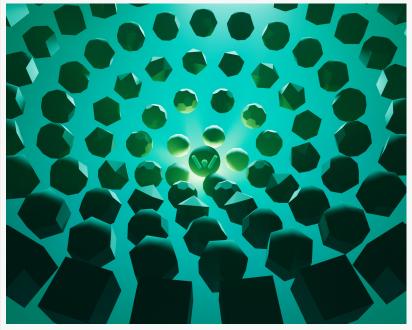

WorkDone's platform is stack-agnostic, easily integrating with existing ERP, CRM, and other systems of record - whether commercial off-the-shelf (COTS) or custom-built - allowing enterprises to deploy Al without disrupting current operations.

Availability

WorkDone's Corporate Memory and Automation offerings are available now for SMB and enterprise customers in North America and Europe.
