

Printed And Flexible Sensors Market is Expected to Grow Tremendously By 2031

*Printed & Flexible Sensors Market
Expected to Reach \$8.6 Billion by
2031—Allied Market Research*

WILMINGTON, DE, UNITED STATES, July 10, 2025 /EINPresswire.com/ -- Allied Market Research, titled, "[Printed and Flexible Sensors Market](#) by Type, Application: Global Opportunity Analysis And Industry Forecast, 2022-2031," The printed & flexible sensors market was valued at \$3.9 billion in 2021, and is estimated to reach \$8.6 billion by 2031, growing at a CAGR of

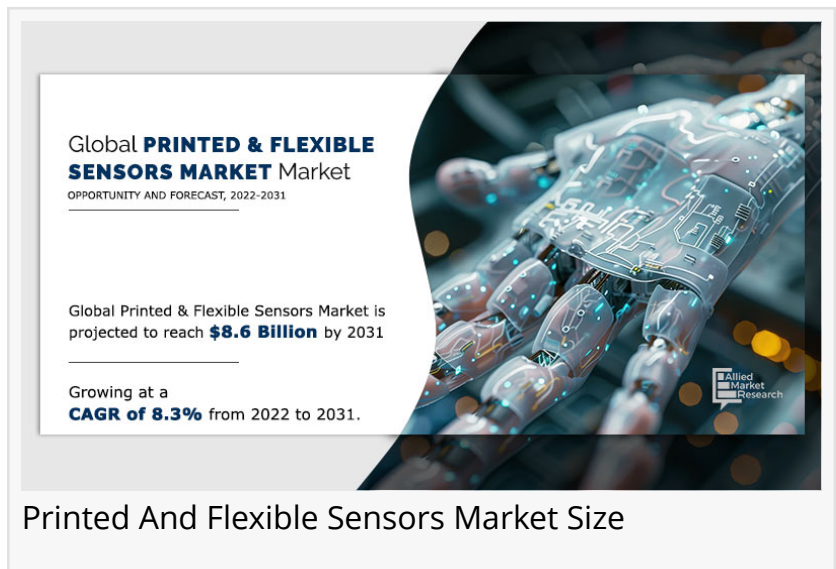

8.3% from 2022 to 2031. Some of the significant factors impacting the global printed and flexible sensors market include the increasing demand for smart and portable electronic products, the use of flexible sensors in the healthcare industry, the rise in the implementation of the Internet of Things (IoT), and cost constraints. The increasing demand from various industries for smart

“

Consumer electronics were the leading application of the printed and flexible sensors market in 2021.”

Allied Market Research

products that incorporate flexible sensors is a major influence on the demand for printed and flexible sensors. However, the high cost of the products is expected to restrain the growth of the market. Meanwhile, the increasing number of applications of printed and flexible sensors provides an opportunity for market players during the forecast period.

Printed and flexible sensors can be defined as sensors printed on flexible materials. These sensors can be stretched or bent when being used, and they still maintain their mechanical and electrical properties. It is possible to package them conformally with devices so that products can be miniaturized. Such advantages have led to the promotion of flexible sensors instead of rigid sensors, especially as the latter sensors also typically lose their sensitivity when subjected

to bending. Printed and flexible sensors have shown enhanced mechanical and thermal properties and lighter weight when compared to rigid sensors.

The [printed and flexible sensors market size](#) is driven by its requirement for portable and smart electronic products from the [consumer electronics](#) industry. These sensors are also extensively required in the healthcare industry, which uses a variety of them. Lastly, they are also expected to be in high demand for deploying the Internet of Things (IoT). However, the market for printed and flexible sensors is restrained by their high manufacturing cost and the adolescent stage of the technologies used to manufacture them. Separately, the expanding number of applications of printed and flexible sensors presents an opportunity for the printed and flexible sensors market to grow during the forecast period. To this end, considerable amounts of funds are being dedicated to research in flexible electronics and flexible sensors.

In terms of market segmentation by printing technology, the printed and flexible sensors market share was dominated by the flexographic printing technology segment in 2021, whereas the screen printing technology segment is expected to witness a higher growth rate during the forecast period. The former is one of the oldest technologies in use in this market, which acts as a major advantage for it. In terms of market segmentation by type, the market was dominated by the image sensors segment in 2021, whereas the chemical sensors segment is expected to witness a higher growth rate during the forecast period image sensors segment benefits from its high demand in the consumer electronics industry. In terms of market segmentation by application, the market was dominated by the consumer electronics segment in 2021, whereas the automotive segment is expected to witness a higher growth rate during the forecast period. The adoption of smart electronics by populations of various countries has led to the growth of the consumer electronics segment.

In terms of region, the printed and flexible sensors market trends were dominated by Asia-Pacific in 2021, even though LAMEA is expected to grow at a faster rate during the forecast period. A major advantage that can be attributed to the Asia-Pacific region is that it is a large market for consumer electronics and the automotive industries, on account of its recent industrialization as well as its large population.

Key findings of the study

- Based on printing technology, the flexographic printing segment accounted for the maximum share of the printed and flexible sensors industry in 2021, while the screen printing technology segment is expected to witness faster growth during the forecast period.

- Based on type, the image sensors segment accounted for the highest share of the printed and flexible sensors market in 2021, while the chemical sensors segment is anticipated to increase faster during the forecast period.
- Based on application, the consumer electronics segment dominated the printed and flexible sensors market in 2021, while the automotive segment is expected to expand at a faster rate during the forecast period.
- Based on region, Asia-Pacific accounted for the largest share of the global printed and flexible sensors market in 2021, while LAMEA is anticipated to grow faster during the forecast period.

In the printed and flexible sensors market analysis, the players profiled in the report include Fujifilm Holding Corporation, Canatu Oy, Interlink Electronics Inc., Tekscan, Inc., GSI Technologies, KWJ Engineering Inc., PST Sensors (Pty) Ltd., ISORG SA, Peratech Holdco Limited, and PolyIC. Various strategies, such as collaborations & partnerships, product launches, and acquisitions, have been adopted by market players to expand their foothold in the printed and flexible sensors market.

About Us:

Allied Market Research is a top provider of market intelligence that offers reports from leading technology publishers. Our in-depth market assessments in our research reports take into account significant technological advancements in the sector. In addition to other areas of expertise, AMR focuses on the analysis of high-tech systems and advanced production systems. We have a team of experts who compile thorough research reports and actively advise leading businesses to enhance their current procedures. Our experts have a wealth of knowledge on the topics they cover. Also, they use a variety of tools and techniques when gathering and analyzing data, including patented data sources.
