Cancer is a medical condition in which abnormal cells develop and have the potential to invade or spread to other parts of the body. The cancer drug market is expected to show significant growth in the market during the forecast period due to the increase in the number of different types of cancer, increasing popularity of advanced treatments such as antibiotic therapy and goals, the development of research methods and the increase in the geriatric population worldwide. In addition, increasing R&D activities and availability of cancer drugs are expected to boost the market growth. It is expected that the high strength of the emerging economy and the number of products produced will provide new opportunities for future sellers. On the other hand, high cost associated with new drug development and side effects associated with cancer treatment are expected to restrain the market growth.
