

# Mucopolysaccharidosis Market Epidemiology Report 2025-2035: Pipeline Therapies, Drugs Sales, and Regional Outlook

*This report also provides a detailed analysis of the current mucopolysaccharidosis marketed drugs and late-stage pipeline drugs.*

BROOKLYN, NY, UNITED STATES, July 15, 2025 /EINPresswire.com/ -- The 7 major [mucopolysaccharidosis market size reach a value of USD 1.7 Billion](#) in 2024. Looking forward, IMARC Group expects the 7MM to reach USD 3.1 Billion by 2035, exhibiting a growth rate (CAGR) of 5.72% during 2025-2035. The shifts in the mucopolysaccharidosis (MPS) market in 2025 show a stronger

focus on aiding patients suffering from these rare genetic disorders. MPS is a genetic condition caused by missing certain enzymes, leading to harmful substance accumulation in the body. Early diagnosis along with timely and effective treatment is crucial since it can affect the brain, heart, bones, and other organs. The evolution of more precise treatment options is one of the key drivers of the MPS market today. Enzyme replacement therapy remains the standard care for many types of MPS as it ameliorates physical symptoms and slows disease progression. However, pharmaceutical companies and researchers are now working on more refined treatments like substrate reduction therapy and gene therapy which tend to be more focused. By 2025, gene therapy continues to gain momentum. Although still in clinical stages for many types of MPS, it has the potential to correct the underlying genetic cause and provide a more lasting impact. Due to these biotechnological transformations, many biotech companies are working on long-term clinical studies aimed at evaluating the safety and effectiveness of these therapies, fundamentally changing the approach of MPS treatment.

Raising awareness and refining newborn screening and genetic testing are making early detection easier. This is important because managing symptoms and improving life expectancy requires early action. The expansion of such services is clearly evident in developed countries, while developing nations are beginning to enhance their capacity for providing rare disease care.

Moreover, digital tools and patient registries are having an increasing impact on the MPS area. These tools assist in monitoring patient outcomes, supporting research, and facilitating communication among patients, caregivers, and health providers. Innovative drug development is also being advanced through collaborations between biotech companies, academic researchers, and healthcare institutions. These consortia target not only the development of a drug but also its affordability and accessibility for patients with rare diseases.

#### Countries Covered:

United States

Germany

France

United Kingdom

Italy

Spain

Japan

#### Analysis Covered Across Each Country:

Historical, current, and future epidemiology scenario

Historical, current, and future performance of the mucopolysaccharidosis market

Historical, current, and future performance of various therapeutic categories in the market

Sales of various drugs across the mucopolysaccharidosis market

Reimbursement scenario in the market

In-market and pipeline drugs

This report also provides a detailed analysis of the current mucopolysaccharidosis marketed drugs and late-stage pipeline drugs.

#### In-Market Drugs:

Drug Overview

Mechanism of Action

Regulatory Status

Clinical Trial Results

Drug Uptake and Market Performance

#### Late-Stage Pipeline Drugs:

Drug overview

Mechanism of action

Regulatory status

Clinical trial results

Drug uptake and market performance

Competitive Landscape with key players:

The competitive landscape of the mucopolysaccharidosis market has been studied in the report with the detailed profiles of the key players operating in the market.

Takeda

BioMarin Pharmaceuticals

Ultragenyx Pharmaceutical

Sanofi

BioMarin Pharmaceutical

Denali Therapeutics

Regenxbio

JCR Pharmaceuticals

JCR Pharmaceuticals

Allievex Corporation
