

Tom's Pest Control Adelaide Safely Removes Wasp Nests from Local Primary School

Tom's Pest Control Adelaide removes wasp nests at primary school, protecting students with fast, discreet treatment and ongoing seasonal monitoring.

ADELAIDE, SOUTH AUSTRALIA, AUSTRALIA, July 24, 2025

/EINPresswire.com/ -- Tom's [Pest Control Adelaide](#) has successfully resolved a potentially dangerous pest situation at a local primary school, removing two active wasp nests located near play areas and staff access points. The quick, safe response helped protect students and staff while ensuring minimal disruption to school operations.

Safety First for Schools and Students

During the late summer months, school staff began noticing an increase in wasp activity near the playground and around an outdoor storage shed. Concerns quickly escalated when it became clear that wasp nests were forming in close proximity to daily student activity—posing a risk, particularly to those with allergies.

"Schools are high-sensitivity environments where safety and timing are absolutely critical," said

“

We always consider the unique nature of school environments when planning and carrying out treatments”

Stefan Barker

Stefan Barker, spokesperson for Tom's Pest Control. "We knew we had to act quickly, discreetly, and in a way that wouldn't cause panic or disrupt school routines."

This situation illustrates the growing need for specialised [education facility pest control](#), where pest management must be handled with extra care and foresight.

Professional Wasp Removal with Zero Disruption

Following a full site inspection, the team located two wasp

nests:

- One hidden in a roof void near a classroom block
- Another embedded in the wall of an external shed near the staff entrance

Understanding the presence of children and staff throughout the day, Tom's Pest Control used a targeted, low-impact treatment to remove the nests safely and quietly outside of school hours. No chemicals were left exposed and all actions complied with strict safety standards.

Two follow-up visits confirmed complete cessation of wasp activity. Preventative tips were also provided, including early detection advice and guidance on sealing outdoor gaps and cracks

where nests are likely to form.

A Safer School Environment and Long-Term Partnership

The immediate outcome was a complete resolution of the wasp problem—no further sightings or incidents were reported, and staff and parents were reassured that the grounds were once again safe for children.

“Our tailored approach not only removed the nests but gave the school peace of mind,” Stefan Barker added.

“We always consider the unique nature of school environments when planning and carrying out treatments.”

Pest Control Experts in Adelaide

Ongoing Prevention with Seasonal Checks

Due to the increased likelihood of wasp nests appearing during spring and summer, Tom's Pest Control now provides seasonal inspections to the school. This proactive plan ensures early detection and intervention—avoiding disruption and reducing health risks to students and staff.
