

Physician Collaborators Helps Nurse Practitioners Start Solo Telehealth Practices Online

Board-certified physicians provide essential support to independent NPs using platforms like Sesame Care and Headway.

JERSEY CITY, NJ, UNITED STATES, July 21, 2025

/EINPresswire.com/ -- Growing numbers of nurse practitioners are establishing independent telehealth practices through platforms like Sesame Care, Headway, and Zocdoc, creating increased demand for collaborating physicians to provide required supervision. [Physician Collaborators](#), a Jersey City-based network of board-certified physicians, are addressing this market need by offering specialized collaboration services for nurse practitioners launching solo telehealth practices.

The telehealth sector has experienced significant growth, with the COVID-19 pandemic accelerating the adoption of virtual care delivery. This trend has created new opportunities for nurse practitioners to establish independent practices, while simultaneously creating challenges in securing appropriate physician collaboration to meet regulatory requirements.

"We're seeing a substantial increase in nurse practitioners who want to start their own telehealth practices through established platforms," said Mr. Michael Harris, spokesman for Physician Collaborators. "These practitioners need collaborating physicians to comply with state regulations, and we provide that essential support to help them succeed in independent practice."

Physician Collaborators offers services across multiple medical specialties, including Internal Medicine, Family Medicine, Emergency Medicine, and Psychiatry. The network provides collaboration for various practice types, including general medicine, behavioral health, telemedicine, urgent care, infusion therapy, and integrative medicine.

Physician Collaborators' approach involves matching nurse practitioners with appropriate collaborating physicians based on their specific practice needs. Each physician in the network has over a decade of experience supervising nurse practitioners and physician assistants. The

organization allows practitioners to switch collaborating physicians at any time, providing flexibility in the partnership arrangement.

"We tailor the level of collaboration to individual needs, from very hands-on guidance to less-involved administrative oversight," Harris explained. "This approach recognizes that different practitioners require different levels of support as they build their independent practices."

The service addresses a specific gap in the healthcare market where nurse practitioners seek to establish independent telehealth practices but require physician collaboration to meet regulatory requirements. Traditional employment models may not suit practitioners who prefer independent practice arrangements, making collaboration services essential for this growing segment of healthcare providers.

Physician Collaborators currently provides services in 40 states, including Alabama, Arizona, California, Colorado, Connecticut, Delaware, Florida, Idaho, Illinois, Indiana, Iowa, Kansas, Kentucky, Louisiana, Maine, Maryland, Massachusetts, Michigan, Minnesota, Missouri, Montana, Nebraska, Nevada, New Hampshire, New Jersey, New Mexico, New York, North Carolina, North Dakota, Ohio, Oklahoma, Pennsylvania, South Dakota, Tennessee, Texas, Utah, Vermont, Virginia, Washington, West Virginia, and Wisconsin, depending on specific nursing practice requirements.

The organization offers free consultations to interested practitioners, providing transparent partnership opportunities. This approach allows nurse practitioners to understand collaboration requirements and costs before committing to services.

"We provide competitive pricing designed to offer value while ensuring practitioners can access our network of supervising physicians without compromising their budget," Harris noted. "We promise to match practitioners with suitable collaborators within a week, helping them get their practices operational quickly."

The telehealth market continues to expand as patients seek convenient healthcare access, particularly in areas with limited healthcare resources or for those facing transportation challenges. This growth creates opportunities for nurse practitioners to serve patients through digital platforms while maintaining independent practice arrangements.
