

# Gaine Technology Launches Coperor Release 8 with Advanced Snowflake Integration

*Latest release includes advanced features for data oversight and security*

SAN LUIS OBISPO, CA, UNITED STATES, July 21, 2025 /EINPresswire.com/ -- [Gaine](#) Technology, a leader in health data management solutions, today announced the release of [Coperor](#) Release 8,

“

Coperor Release 8 marks a pivotal advancement in how healthcare data can be managed and utilized”

*Andrew Cone, Gaine CRO*

the latest update to its Health Data Management Platform (HDMP). This update introduces significant enhancements, with a key focus on [seamless integration with Snowflake](#), a market leading data lake and warehousing solution, to enable real-time data replication for healthcare data leaders that substantially enhances analytics and decision-making capabilities.

“Coperor Release 8 marks a pivotal advancement in how healthcare data can be managed and utilized,” said Gaine CRO Andrew Cone. “The integration with Snowflake, combined with enhanced self-service and security features, equips organizations with the tools needed to make informed decisions based on compliant, accurate, and real-time data.”

## Real-Time Data Replication through Snowflake Integration

Coperor Release 8 integrates seamlessly with Snowflake, a cloud-based data platform built for high-performance storage and analysis of large datasets. This integration delivers healthcare data that’s cleansed, deduplicated, enriched, and standardized for immediate use within Snowflake and across mission critical enterprise applications.

Coperor also tailors this data to the specific format, structure, or granularity needed by each consuming application, ensuring compatibility and privacy by delivering only essential information. By unifying inputs from systems like provider data CRM’s, electronic medical records and claims platforms, it longitudinally resolves fragmentation, maps key relationships such as patient-to-provider links, and updates data in real time to make Snowflake a reliable hub for insights.

## New Tools for Data Management and Insights

In addition to the Snowflake integration, Coperor Release 8 introduces self-service tools that empower healthcare data leaders to manage data more effectively. Organizations can configure data sources, establish survivorship rules for quality assurance, and set up data checks directly

within the platform to maintain data integrity.

The release also includes interactive dashboards designed to display critical data health metrics for domains such as providers and patients. These dashboards offer visualizations of compliance rates and trends over time, with templates that can be adapted to specific needs in under an hour. Features like filtering, drill-down capabilities, and export options ensure detailed analysis is accessible.

#### Strengthened Security and System Performance

Security enhancements in the release include Field-Level Security (FLS) and Role-Based Access Control (RBAC), enabling precise management of data access. Integration with Single Sign-On (SSO) providers like Okta and Azure AD further bolsters security and user convenience.

Additionally, expanded data model templates for domains like Account, Broker, Agency, Provider, and Member offer greater flexibility in handling diverse data requirements.

#### Operational and Developer Enhancements

For technical teams, Coperor Release 8 brings a new Command Line Interface (CLI) that reduces reliance on local files and accelerates the deployment of changesets to improve the development experience and support best practices in DevOps and SDLC processes.

#### About Gaine Technology

Gaine Technology, founded in 2007 and headquartered in San Luis Obispo, Calif., is a leading provider of enterprise data management solutions for the healthcare and life sciences industries. Gaine's flagship offering is Coperor Health Data Management Platform (HDMP), which enables healthcare organizations to achieve operational excellence and improved outcomes by creating a unified data foundation. The platform provides robust governance capabilities to ensure that accurate and consistent data is accessible throughout the enterprise.

With a commitment to breaking down data silos and fostering interoperability, Gaine helps clients achieve real-time, actionable insights that enhance care delivery and financial performance. Recognized as a Major Player in the IDC MarketScape for U.S. Healthcare Data Platforms and a Representative Vendor in the 2024 Gartner Market Guide for Health Data Management Platforms, Gaine continues to deliver innovative solutions that address the complex data challenges of today's healthcare landscape.
