

FinNewsAPI Unveils New Update to Empower Developers and Financial Institutions with Real-Time Global Market Insights

NEW YORK, NY, UNITED STATES, July 23, 2025 /EINPresswire.com/ -- [FinNewsAPI](#) has officially launched a major update to its financial news API service, delivering faster, more accurate, and globally inclusive data to developers, fintech platforms, and financial institutions worldwide. The update introduces improvements in three key areas:

1. Expanded Coverage Across Languages and Sources

Now aggregating data from over 500,000 sources across 60 languages, FinNewsAPI enables real-time access to a global financial newsstream using WebSockets. This includes updates on stock markets, crypto assets, forex, central bank policy, company announcements, and macroeconomic shifts.

2. Advanced Filtering by News Category

Users can now subscribe to granular topics such as "Cryptonews," "Central Bank," or "Macro-Economy," allowing for precise monitoring. For example, those tracking the crypto sector were immediately alerted when SpaceX reportedly moved \$152 million worth of Bitcoin last week.

3. Transparent, Scalable Pricing

At just \$1 per 1,000 requests, FinNewsAPI adopts a credit-based system with a minimum recharge of \$50. Credits do not expire, and high-volume clients exceeding 1M requests/month are eligible for custom enterprise pricing.

Tracking the Pulse of Global Finance with Real-Time Headlines

· ECB's Interest Rate Strategy Calms Markets as Euro Falls

A weakening euro is giving the European Central Bank breathing room, suggesting it may hold or even cut rates later in the year. FinNewsAPI users with "Central Bank" filters received alerts within seconds of this news hitting the wire.

· JPMorgan Reportedly Plans Crypto-Collateral Loans

According to recent leaks, JPMorgan is exploring lending services backed by crypto assets like Bitcoin and Ethereum. FinNewsAPI's "Cryptonews" stream detected this immediately through major financial outlets.

- IMF to Raise Global Growth Forecast, but Trade Wars Loom

The IMF has hinted at a slightly improved growth outlook for 2025, though it warned that ongoing trade tensions could destabilize global recovery. FinNewsAPI tags such developments under “Macro-Economy” and “Trade,” ensuring they reach relevant analysts fast.

Why FinNewsAPI Stands Out

FinNewsAPI provides high-speed financial news access with unmatched granularity. It supports real-time WebSocket pushes with millisecond latency, making it ideal for quant traders, hedge funds, fintech builders, and economic researchers. Users can filter by financial sectors (stocks, crypto, forex, commodities, etc.) or by topics like central bank policy, M&A activity, or macro shifts.

The API is built around a lightweight RESTful architecture with easy integration, human-readable JSON responses, and pay-as-you-go pricing. Even at scale, the system remains responsive and developer-friendly.

Real-World Use Cases for FinNewsAPI

- Quantitative Trading Teams

Integrate real-time news with alpha models to catch regulatory announcements, interest rate shifts, or flash crashes caused by geopolitical shocks.

- Financial Research & Institutional Strategy Teams

Monitor breaking crypto news (e.g., JPMorgan’s crypto loan initiative) or market-moving central bank statements to adjust positioning.

- News Aggregators & Financial Platforms

Use FinNewsAPI to enrich user dashboards with real-time global updates tagged by relevance, improving user engagement and retention.

About FinNewsAPI

FinNewsAPI delivers a real-time financial news data stream sourced from hundreds of thousands of global news providers. It offers developers and institutions a simple, scalable way to gain visibility into the events driving global financial markets. Clients include trading firms, exchanges, research platforms, and media services.

What’s Next?

FinNewsAPI plans to launch support for ESG-specific topics, AI-driven sentiment extraction, and multilingual summarization by Q4 2025. These features will help institutions keep pace with the growing demand for sustainable investing and machine-readable insights.
