

Skimmed Milk Market Size Expected to Reach \$16,498 Million by 2024

Global skimmed milk market was valued at \$9,894 million in 2017, and is projected to reach \$16,498 million by 2024, registering a CAGR of 7.3%

WILMINGTON, DE, UNITED STATES, July 25, 2025 /EINPresswire.com/ -- Skim milk is a type of milk, which is created by removing cream from milk. The modernized and quick way of making skim milk is to place the whole milk into a machine called a centrifugal separator, which spins some or all of the fat globules out of the milk. As cream has been removed from milk, it contains 0-0.5% of fat contents, usually has an average fat content of 0.1%. Skim milk is lower in calories as compared to other types of milk and it contains lactose, milk proteins, and minerals in the same relative proportions as the fresh milk from which it was made.

The key players operating in [skimmed milk market](#) include Alpen Dairies, Amul, Arla Foods, Dairy Farmers of America Inc., Danone S.A., Fonterra Co-operative Group Limited, LACTALIS Ingredients, Nestle S.A, Saputo Inc., and Schreiber Foods Inc.

Skim milk has slightly more calcium and protein when compared to full fat milk and has no added sugar. It is loaded with protein, calcium, phosphorous, vitamin D, and vitamin A, making it a source of high-quality complete protein. It helps build strong bones, teeth, and muscles, and also aids in healthy weight management. Owing to these beneficial nutrients and health benefits associated with skimmed milk, the demand for skimmed milk has increased significantly, thereby driving the market growth.

Skim milk is primarily used in confectionery foods in particular. Manufacturers use skimmed milk in its powdered form in baking recipes to enhance the tenderness of the food such as

doughnuts, cakes, and bread. Adding skimmed milk powder to bakery and confectionery products renders the firmness thereby making them tender. It is also used while preparing chocolates, savories, baked sweets, and other confectionaries to improve flavor and water binding capacity allowing the bakery product to remain fresh longer. However, to make up for saturated fats, sugar is added to skim milk, which can lead to health issues such as diabetes and hypoglycemia. In addition, the dairy industry often adds dried milk powder to skim milk as protein fortification, causing the oxidization of the cholesterol in the milk. This leads to buildup of plaque in the arteries, inflammation in the body, and contribute to heart disease. These adverse effects of skim milk on human body limit the growth of the skimmed milk market.

In addition, the increase in use of dairy alternative products prepared from milk, derived from various plant-based sources such as almond, soy, rice, coconut, and others also affect the growth of the skimmed milk market. Moreover, the skim milk costs a little higher than the regular milk, which also hampers the growth of the market in the developing regions such as China & India as it has large price sensitive middle-class population. Casein and caseinates, which is widely as food ingredients in products such as dairy desserts, milk-based beverages, sports-nutrition, confectionery, meat products, and non-dairy creamers are generally prepared from skim milk by acid precipitation. Increase in use of casein and caseinates by food industry further fuels the demand for skimmed milk.

Key Findings of the Skimmed Milk Market:

In 2017, Asia-Pacific accounted for the highest market share growing at a CAGR of 7.7% from 2018 to 2024.

In 2017, confectionary application segment accounted for the highest market share and is expected to growth at the highest CAGR of 8.1%.

Hypermarket accounted for the highest market share in 2017 and is projected to grow at the highest CAGR of 8.1%.

In 2017, the U.S. accounted for the highest market share and is anticipated to grow at a significant CAGR of 7.3%.

China is anticipated to grow at the highest CAGR of 10.2% from 2018 to 2024.

In terms of value, Asia-Pacific and LAMEA collectively contributed more than half of the share in the global market in 2017.
