There are several types of Oncology/Cancer Drugs, including:

1. Chemotherapy drugs: These are the most commonly used cancer drugs and are usually given through a vein (intravenously) or taken orally. Chemotherapy drugs can be used to treat a wide range of cancers, including solid tumors and blood-related cancers such as leukemia.
2. Targeted therapy drugs: These drugs target specific molecules or pathways involved in the growth and spread of cancer cells. They are often used in combination with chemotherapy or

Oncology/Cancer Drugs Market Statistics, Forecast - 2033

other treatments.

3. Hormonal therapy drugs: These drugs are used to treat cancers that are sensitive to hormones, such as breast and prostate cancer. Hormonal therapy drugs work by blocking the production or action of hormones that are necessary for the growth of cancer cells.

4. Immunotherapy drugs: These drugs help to boost the body's own immune system to fight cancer. They are sometimes used in combination with other treatments.

5. Radiation therapy drugs: These drugs are used to treat cancer with high-energy beams of radiation that can kill cancer cells and shrink tumors.

It's important to note that the type of cancer drugs used, the dosage, and the duration of treatment will depend on several factors, including the type and stage of cancer, overall health, and personal preferences. A cancer specialist, such as an oncologist, can provide guidance on the best treatment options.

Major market players covered in the report, such as -

- F. Hoffmann-La Roche Ag,
- Astrazeneca Plc,
- Astellas Pharma Inc.,
- Bristol-Myers Squibb Company,
- Johnson & Johnson,
- Novartis International Ag,
- Amgen, Inc.,
- Abbvie Inc.,
- Merck & Co., Inc.,
- Pfizer, Inc.
