GYTPOL Announces Integration with SentinelOne Singularity Platform

Integration amplifies visibility, accelerates compliance enforcement, and unifies security response workflows

NEW YORK, NY, UNITED STATES, July 29, 2025 /EINPresswire.com/ -- GYTPOL, a leading provider of configuration-centric endpoint security, today announced a strategic integration with the SentinelOne® (NYSE: S) Singularity® Platform. This integration empowers enterprises with real-time configuration visibility, automated compliance enforcement, and tighter incident response — all seamlessly embedded within SentinelOne's robust end-to-end AI-powered cybersecurity platform.

> Security teams need more than visibility, they need to understand how mis-configurations & compliance gaps expose them to real risk"
>
> *Melissa K. Smith*

Embedding GYTPOL's rich configuration intelligence and policy validation into SentinelOne's Singularity® Data Lake, XDR, and automation ecosystem, the joint solution gives security teams a unified, risk-aware command and control of their entire environment.

"Together with SentinelOne, we're giving security teams the clarity and control they need to close compliance gaps before they become business risks," said Tal Kollender, CEO of GYTPOL. "This partnership creates a continuous feedback loop for posture validation, remediation, and real-time risk mitigation."

The integration empowers teams to surface compliance gaps as part of threat intelligence, automate context-aware remediation, and operationalize configuration security within existing SentinelOne workflows for stronger, faster, and smarter defense.

The result is a monitoring & management framework in which posture deviations are no longer hidden and remediation is actionable across the stack.

With this integration, security and compliance teams can:

▪• 𝗦𝗲𝗲 𝗿𝗲𝗮𝗹-𝘁𝗶𝗺𝗲 𝗰𝗼𝗻𝗳𝗶𝗴 𝗺𝗶𝘀𝗮𝗹𝗶𝗴𝗻𝗺𝗲𝗻𝘁𝘀: GYTPOL continuously streams endpoint-level configuration data into SentinelOne, flagging misalignments with CIS, NIST, and internal benchmarks.

▢• ▢▢▢▢▢▢▢▢▢ ▢▢▢▢▢▢▢▢▢ & ▢▢▢▢▢▢ ▢▢▢▢▢▢▢▢▢▢▢▢: View misconfigurations and policy violations in the same context as threat detections to better understand risk relationships.

▢•▢▢▢▢▢▢▢ ▢▢▢▢▢▢▢▢▢ ▢▢▢▢▢▢▢▢ ▢▢▢▢▢▢▢: Use SentinelOne automation to isolate or segment devices based on GYTPOL's posture findings.

▢• ▢▢▢▢▢▢ ▢▢▢▢▢▢▢▢ ▢▢▢▢▢▢▢▢▢▢▢: Automate precise corrective actions using GYTPOL's safe remediation workflows, directly from SentinelOne.

▢• ▢▢▢▢▢▢▢▢ ▢▢▢▢▢▢▢▢▢▢ ▢▢▢▢▢▢▢▢▢▢: Streamline audits and evidence collection with continuous assurance of policy enforcement and drift detection.

"Security teams need more than visibility, they need to understand how misconfigurations and compliance gaps expose them to real risk," said Melissa K. Smith, VP of Technology Partnerships & Strategic Initiatives at SentinelOne. "Integrating GYTPOL into the Singularity Platform brings configuration intelligence into the core of threat operations, enabling teams to detect drift in real time, automate enforcement, and remediate faster. Together, we're transforming cyber hygiene into a continuous, strategic capability that drives smarter, more resilient security."

This collaboration brings together GYTPOL's proactive configuration assurance with SentinelOne's world-class detection and response capabilities — enabling security teams to prevent misconfigurations from becoming vulnerabilities and act with speed and precision when they do.

SentinelOne is a leading AI-powered cybersecurity platform. Built on the first unified Data Lake, SentinelOne empowers the world to run securely by creating intelligent, data-driven systems that think for themselves, stay ahead of complexity and risk, and evolve on their own. Leading organizations—including Fortune 10, Fortune 500, and Global 2000 companies, as well as prominent governments - trust SentinelOne to Secure Tomorrow™. Learn more at sentinelone.com.

GYTPOL is a first-of-its-kind solution provider focused on the configuration side of endpoint security. Predicated on principles of automation and prevention, GYTPOL continuously monitors devices and systems, detecting unpatched vulnerabilities and insecure configurations. The platform enables proactive and non-disruptive remediation (or reversion) at the push of a button – ensuring safe and strict policy adherence while bolstering operational resilience and business continuity.

With GYTPOL, it's easy to bring any device or group in line with the standards of your choosing (e.g. CIS, NIST, etc.). Additionally, GYTPOL helps organizations create and enforce golden image configurations – assuring consistent and secure baselines across all devices.
