

# Express Delivery Industry Outlook (2021–2030) : Market to Grow at 6.4% CAGR, Reaching \$484.38 Billion

WILMINGTON, NEW CASTLE, DE, UNITED STATES, August 1, 2025 /EINPresswire.com/ -- According to a recent report published by Allied Market Research, titled, "[Express Delivery Market](#) Size, Share, Competitive Landscape and Trend Analysis Report, by Application (B2B and B2C), End Use (E-commerce Platform, Document Service and Others) and Destination (Domestics and International): Global Opportunity Analysis and Industry Forecast, 2021-2030."

**Market Size :** The global express delivery market was valued at USD 262.86 billion in 2020, and is projected to reach USD 484.38 billion by 2030, registering a CAGR of 6.4% from 2021 to 2030.

Asia-Pacific dominates the market presently, followed by Europe, North America, and LAMEA. In Asia-Pacific, China dominated the electric vehicle supply equipment market in 2020, and is expected to maintain its dominance during the forecast period. Key factors that drive the growth are growth in production of electric vehicles, rise in adoption of electric vehicle owing to government initiatives, and increase in demand for low-emission and fuel-efficient vehicles are expected to boost the growth of the electric vehicle supply equipment market. However, high cost of electric vehicles and high cost of electric vehicle charging infrastructure restrains the growth of the market. Furthermore, development of wireless charging technology and incorporation of Vehicle-To-Grid (V2g) EV Charging Stations provide lucrative growth opportunity for the players operating in the electric vehicle supply equipment market.

Electric vehicles offer multiple advantages such as low operating cost compare to conventional

gasoline engine, implementation of stringent government regulations to limit environment pollution, and decreased emissions from tailpipes, which significantly boost their demand across the globe. For instance, electric vehicle sales have surged, owing to growth in China, the US, and Europe markets. The sales of electric vehicles increased by 160% in the first half of 2021 from a year earlier, to 2.6 million units, representing 26% of new sales in the global automotive market. Further, this in turn is expected to escalate the need for electric vehicle supply equipment for electric vehicles during the forecast period.

In addition, key players operating in the electric vehicle supply equipment industry are adopting various strategic moves such as product development and product launch, to tap the business potential. For instance, ABB Ltd. has launched all-in-one electric vehicle charger, which provides the fastest charging experience on the market. The new electric vehicle charger is world's fastest charger that can deliver 100 km of range in less than three minutes. Further, the new charger is designed explicitly to charge up to four vehicles at once. Therefore, factors such as increasing charging stations in public places and highways, low operating cost, and implementation of stringent government regulations to limit environment pollution expected to spur the electric vehicles across the globe.

Government of the various countries are taking initiatives to support the adoption of electric vehicle to meet the fuel consumption standards and reduce emission of greenhouse gases. For instance, the Japan government prepared a policy for electric vehicles in August 2018 for better cooperation and smooth transition in the automotive industry. In addition, it has started an initiative named Faster Adoption and Manufacturing of hybrid and Electric Vehicles II (FAME). According to this, incentives will be provided to promote the local manufacturing of electric vehicle. Thus, such government initiatives are expected to drive the growth of the electric vehicle and electric vehicle supply equipment market.

Gasoline being a fossil fuel is not a renewable source of energy and is projected to exhaust in the future. To support sustainable development, it is important to develop and use alternative sources of fuel. This involves use of electric vehicles that do not use gas and are more economical than conventional vehicles. An electric vehicle converts over 50% of the electrical energy from the grid to power at the wheels, whereas the gas-powered vehicle only manages to convert about 17%-21% of the energy stored in gasoline. The demand for fuel-efficient vehicles has increased recently owing to rise in price of petrol and diesel. This is due to depleting fossil fuel reserves and growth in tendency of companies to gain maximum profit from these oil reserves. Thus, these factors give rise to the need for electrically powered vehicles for travel, which in turn is anticipated to propel the growth of the electric vehicle supply equipment market.

Electric vehicles are advantageous over conventional vehicles; however, their cost is higher than

traditional vehicles. The additional cost of buying an electric vehicle instead of fuel-powered vehicle is mainly due to the high cost of battery. Involvement of expensive manufacturing process and use of costly raw material are the major reasons for the high cost of electric vehicles. Thus, these factors add up to the cost of electric vehicle, and restrain the growth of electric vehicles, which in turn hinders the growth of the electric vehicle supply equipment market.

#### COVID-19 Impact Analysis :

This COVID-19 pandemic impacted the revenue streams allocated towards the R&D and adoption of new technologies

Amid lockdown, shutdown of various manufacturing facilities and shipping delays has made getting a new vehicle a challenge.

#### Key Findings Of The Study :

In 2020, by application, the residential segment generated the highest revenue.

In 2020, by type, the level 2 segment was the highest revenue contributor.

In 2020, region-wise, Asia-Pacific contributed the highest revenue, followed by Europe, North America, and LAMEA.

Inquire Before Buying : <https://www.alliedmarketresearch.com/purchase-enquiry/A07130>

The key players analyzed in the electric vehicle supply equipment market include Abb Ltd, BP Chargemaster, Chargepoint Holdings, Inc, Delta Electronics, Inc, Eaton Corporation Plc, Leviton Manufacturing Co., Inc., Schneider Electric, Siemens AG, Tesla and Webasto Group.

About us :

Allied Market Research (AMR) is a full-service market research and business-consulting wing of Allied Analytics LLP based in Wilmington, Delaware. Allied Market Research provides global enterprises as well as medium and small businesses with unmatched quality of "Market Research Reports" and "Business Intelligence Solutions." AMR has a targeted view to provide business insights and consulting to assist its clients to make strategic business decisions and achieve sustainable growth in their respective market domain.

We are in professional corporate relations with various companies, and this helps us in digging out market data that helps us generate accurate research data tables and confirms utmost accuracy in our market forecasting. Each and every data presented in the reports published by us is extracted through primary interviews with top officials from leading companies of domain concerned. Our secondary data procurement methodology includes deep online and offline research and discussion with knowledgeable professionals and analysts in the industry.
