

A New Way to Invest in Wind Energy Launching Today

First Time Ever Fund for Farms of Small Wind Turbines

LUBBOCK, TX, UNITED STATES, August 6, 2025 /EINPresswire.com/ -- [Flower Turbines](https://www.flowerturbines.com/projectseries1) Projects Series 1 LLC is the first opportunity to invest in projects of small wind turbines with energy produced at the location of use.

More information, registration, and a link to the investment platform can be found at <https://www.flowerturbines.com/projectseries1>

It is launching today, August 6, 2025, on the Honeycomb crowdfunding platform. Investors via bank transfer (ACH) until 9:30 AM EST on August 7 will not be charged the usual bank transfer fee from the platform.

This is an asset-backed investment with many benefits:

- Investing in increments of \$500
- Geographically diverse portfolio of potentially high yield projects
- Distributions come from sale of electricity, investment tax credit (up to 40%), carbon credits, capital gains

This is a win-win-win:

Investors: Potential for attractive dividends backed by asset ownership.

Host commercial buildings: Lower-cost electricity and an option to purchase after 7 years.

The environment: More clean, renewable energy that is cost-effective

The reason this is happening for the first time is that the parent company, Flower Turbines, Inc., has pioneered and patented higher efficiency vertical axis small wind turbines and a "bouquet" effect--that each turbine added to a group at close range makes the whole system perform

better. This technology advance enables better returns on investment and better returns on space used.

As an example, 4 turbines correctly arranged perform as well as 8 turbines separately. This has a tremendous potential effect on the cost of wind energy in urban and rural commercial and residential projects, or anywhere else where space is limited. The significance is like the difference between being able to put only one solar panel per roof versus many. And Flower Turbines does one better: its turbines make their neighbors perform better. This is an important scientific and business-model innovation.

The turbines are also beautiful, quiet, and bird friendly. They start at lower speeds than other turbines and endure higher speeds. Their 30+ patents are loaded with aerodynamic, engineering, and electronic advances.

Flower Turbines, Inc. has external validation as a top company:

- Awarded the "Solar Impulse Efficient Solution" Label, a proof of high standards in profitability and sustainability to protect the environment. Here is a link to the page about Wind Tulips on the Solar Impulse website: <https://solarimpulse.com/efficient-solutions/wind-tulips#>
- A winner of Pepperdine Graziado Business School's annual Most Fundable Companies in America list. Flower Turbines was judged to be in the top 10 among 4500 startup companies examined.
- Winner of the Dutch government sustainability award for two separate years.
- A winner of the 2023 Yes San Francisco clean technology competition for top technologies to implement in San Francisco in association with the World Economic Forum
- The CEO was chosen as a 2021 innovator of the year by the US Department of Energy Impel+ program.

The Cluster Effect

Average Watts Per Small Wind Turbine at 10m/s

This shows how each turbine produces more energy as another turbine is clustered. 5 Flower Turbines together produce 228% more power than 5 separate turbines.

Bouquet of Wind Tulip Turbines

- Chosen by US Department of Housing and Urban Development for its Innovation Showcase on the Washington Mall
- Winner of many other awards

This funding round is only open to US citizens. Citizens of other countries interested in making large investments can contact the company directly at support.us@flowerturbines.com

Commercial properties interested in hosting such a project can see the criteria at
