

# AIM Intelligence secures \$1.3M Pre-A to set global standard in generative AI security

*Backed by Mirae Asset Capital, Bluepoint (LG U+ Fund), Z Venture Capital, and Mashup Ventures*

NEW YORK, NY, UNITED STATES, August 7, 2025 /EINPresswire.com/ -- AIM Intelligence has raised \$1.3 million in a Pre-A round as demand for safe, aligned AI reaches unprecedented levels. The round was led by Mirae Asset Capital, with backing from Bluepoint Partners (via the LG U+ Strategic Fund), Z Venture Capital (ZVC), and follow-on investor Mashup Ventures.

The logo for AIM Intelligence, featuring the word "AIM" in a large, bold, black sans-serif font, followed by a small red dot. Below "AIM" is the word "Intelligence" in a slightly smaller, bold, black sans-serif font.

AIM Intelligence Logo

This funding will accelerate development of infrastructure to ensure the safety, alignment, and controllability of next-generation generative AI systems.

The company is focused on addressing foundational risks like hallucinations, data leakage, and adversarial misuse as AI systems assume greater decision-making autonomy.

AIM Intelligence's core product suite includes AIM Red, which automates penetration testing and vulnerability discovery through AI red-teaming; AIM Guard, which provides real-time filtering of unsafe inputs and outputs; and AIM Supervisor, which monitors AI agent reasoning paths to detect policy drift and unsafe cognition.

These technologies have already been adopted across high-stakes sectors including finance and telecommunications. Clients such as KB Kookmin Card, KB Securities, Woori Bank, and LG Uplus have deployed AIM's tools, with LG Uplus also conducting a pilot project as part of its strategic investment. Further collaborations include generative AI reliability testing with KT, LG AI Research, the Korea Credit Information Service, and the Telecommunications Technology Association (TTA).

AIM Intelligence's impact extends beyond Korea. In 2024, the company won Meta's Llama Impact Innovation Award—the only Korean recipient—and was chosen by Anthropic for its private bug

bounty program. Through this partnership, AIM Intelligence successfully identified and reported security vulnerabilities in non-public Claude models, including policy bypasses and adversarial prompt vectors.

Its research leadership has been recognized globally, with four papers accepted at top-tier AI conferences including ICML and ACL.

“Our mission is to prevent AI failures before they occur,” said David Yu, CEO of AIM Intelligence. “We are laying the groundwork for Sovereign AI—systems that are institutionally aligned, independently operable, and fundamentally safe.”

With this new fund, AIM Intelligence will deepen its research capabilities, expand internationally, and push forward into new frontiers such as multimodal and embodied AI systems, as it works to establish the global benchmark for generative AI security.
