

Tyche Launches Reset8™ for Advanced Mould Removal in Singapore

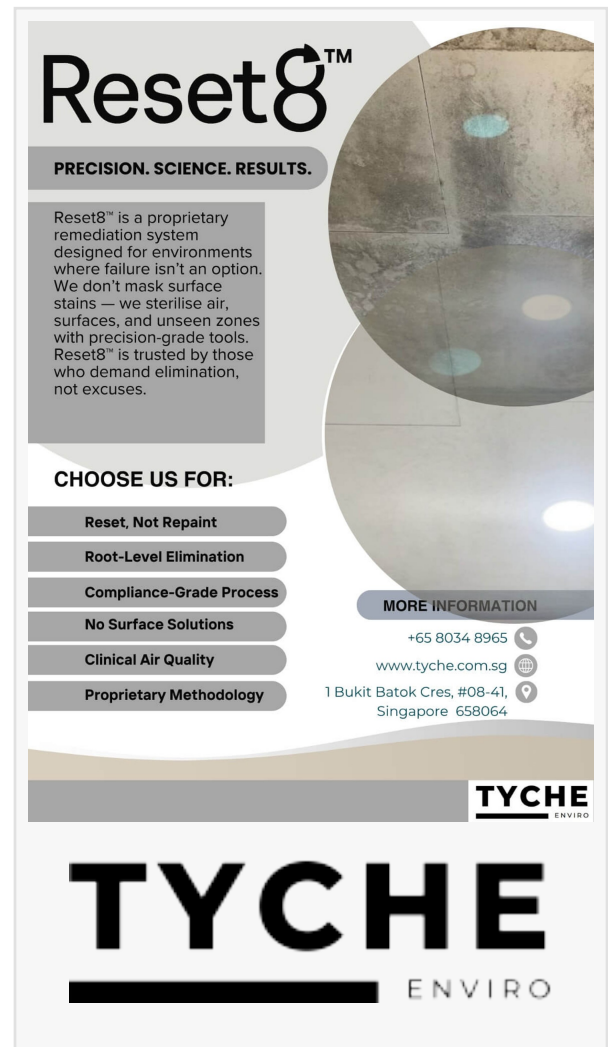

With a science-backed, compliance-grade process, Reset8™ delivers complete sterilisation of air and surfaces—no repainting needed.

SINGAPORE, SINGAPORE, August 13, 2025
/EINPresswire.com/ -- [TYCHE Enviro](#) is pleased to introduce Reset8™, a proprietary remediation system now available in Singapore. As more people become concerned about their overall well-being, there is an increase in the demand for professional services to address mould growth, poor indoor air quality, and even surface-level cleaning. Not only does this apply to residential homes, but it also emphasises the importance of maintaining cleanliness and hygiene in critical environments, such as hospitals, laboratories, and even commercial spaces.

What is Reset8™?

The Reset8™ system provides thorough, high-quality sterilisation that keeps your surroundings clean and free of harmful pathogens. Its function is to ensure hidden pollutants are not masked by various factors beyond your control and are eliminated to maintain your well-being.

The Reset8™ system is a breakthrough technology that utilises precision-grade tools to tackle indoor pollution. Unlike other conventional systems, Reset8™ focuses on mitigating mould risk and eliminating other pathogens at the root, including the air, on various surfaces, and even in hidden areas. "We developed Reset8™ to meet a growing need for reliable [mould remediation](#) in Singapore's hot and humid climate," a TYCHE spokesperson said. "Our goal is to offer a science-backed, comprehensive solution that prioritises your health, safety, and compliance with local regulations."

Reset8™

PRECISION. SCIENCE. RESULTS.

Reset8™ is a proprietary remediation system designed for environments where failure isn't an option. We don't mask surface stains — we sterilise air, surfaces, and unseen zones with precision-grade tools. Reset8™ is trusted by those who demand elimination, not excuses.

CHOOSE US FOR:

- Reset, Not Repaint
- Root-Level Elimination
- Compliance-Grade Process
- No Surface Solutions
- Clinical Air Quality
- Proprietary Methodology

What Makes Reset8™ Unique?

The Reset8™ system offers several key differentiators compared to other competitor systems.

Reset, Not Repaint

Reset8™ aims to clear out harmful contaminants to safeguard your well-being and that of others who share a common environment. Contamination can occur at any time, unexpectedly, so Reset8™ forgoes cosmetic cover-ups to ensure your long-term safety and wellness against pollutants.

Thorough Remediation

Reset8™ is intended to provide complete sterilisation and cleaning services to remove pathogens and spores that have made their home in your property. TYCHE aims to ensure that Reset8™ can provide high-quality remediation for the sake of your well-being, which means targeting hidden microbial growths, not just visible stains.

No Surface Solutions

Aims to go beyond standard cleaning methods, Reset8™ utilising sterilisation-grade tools for the quality remediation you deserve.

Compliance-Graded

Reset8™ meets all the necessary health and safety standards through rigorous quality testing and refinements to the system's deployment. That way, TYCHE can confidently demonstrate that the Reset8™ sterilisation and remediation are up to par.

Maintaining Air Quality

Reset8™ can help to achieve hospital-grade clean air through its clinically tested air purification system. Air quality is a significant concern in critical environments, and Reset8™ may help prevent harmful airborne pathogens and mould colonies from compromising your health and safety.

Proprietary Methodology

As a proprietary innovation, the Reset8™ is not built around ready-made, off-the-shelf solutions. It relies on a set of unique tools and technologies tailored to create a comprehensive remediation system that can help provide an effective solution for safely and efficiently removing harmful pathogens.

Why the Reset8™ Matters Now

Unprecedented changes in our local climate are causing numerous challenges that hinder indoor air quality, including the risk of mould infestations in damp, hidden areas. At the same time, other issues, like airborne pathogens, can also endanger your health.

According to the US [Environmental Protection Agency \(EPA\)](#), indoor air quality refers to the “air quality within and around buildings and structures,” and can largely change based on various factors, many of which are beyond our control. Health complications can suddenly arise due to poor indoor air quality, which can occur unexpectedly after short-term or long-term exposure. The recent concern of possible transboundary haze raises the importance of maintaining indoor air quality for everyone’s benefit.

Maintaining indoor air quality can be invaluable in keeping mould and other pollutants at bay. It is essential to ensure that indoor air quality consistently meets safe levels that promote our well-being. That is of particular importance in critical environments: hospitals, laboratories, clinics, and even childcare centres are just a few locations that would benefit from regular, certified remediation services.

“We hope that the Reset8™ system can help to safeguard the well-being of Singaporeans in various indoor settings,” the TYCHE spokesperson added. “Thus ensures that people can enjoy clean air at all times.”

About TYCHE Enviro

TYCHE Enviro is a professional mould remediation company with years of experience in providing high-quality environmental and mould removal services. TYCHE manages a well-trained group of professionally qualified technicians who employ certified, eco-friendly technologies approved by the Singaporean Ministry of Health and National Environment Agency (NEA). With a customer-oriented approach and a diverse range of services, TYCHE is committed to safeguarding your well-being with environmentally responsible solutions to keep you and your property safe from mould, mildew, and other concerns.
