

Fasoo Delivers CAD File Security Built for Semiconductor Supply Chain Collaboration

SEOUL, SOUTH KOREA, August 19, 2025 /EINPresswire.com/ -- [Fasoo](#), the leader in data-centric security, today announced growing adoption of its file-centric collaboration and [protection solutions in the semiconductor industry](#).

The logo for Fasoo, consisting of the word "FASOO" in a bold, blue, sans-serif font.

Fasoo - a leader in data-centric security

In today's competitive semiconductor market, a leaked CAD file can derail years of R&D and jeopardize billions in potential revenue. As global R&D networks expand, chipmakers must enable fast, distributed design collaboration without losing control over their most valuable assets.

"Semiconductor companies operate in a high-stakes environment where a single file could potentially represent years of R&D and millions of dollars," said [Jason Sohn, Executive Managing Director at Fasoo](#). "Fasoo significantly reduces threat surfaces for organizations and secures sensitive and critical intellectual property assets through an advanced data security and data-centric collaboration platform designed for the global ecosystem companies."

Semiconductor design workflows involve exchanging CAD drawings, IC schematics, and fabrication documentation across multiple engineering sites, external partners, and vendors. Without proper safeguards, sensitive files can be copied or downloaded insecurely, and leaks from insiders or third parties can go unnoticed.

Fasoo Enterprise DRM (FED) protects sensitive files from the moment they are created, applying persistent encryption and granular access controls—by user, device, region, and time—directly into the file. Unlike network- or device-based controls, FED keeps protection with the file wherever it travels.

Full CAD format support ensures that the crown jewels, including chip layouts, schematics, and process diagrams, stay protected without slowing engineering workflows.

For cross-border and multi-vendor projects, Wrapsody eCo provides a secure, centralized platform where partners can view documents through a secure web viewer with dynamic

watermarking, version control, and detailed activity logs. Downloads can be blocked entirely, and access can be revoked in real time, even after a file has been shared.

This ensures that semiconductor IP remains protected throughout the entire collaboration lifecycle.

With the global semiconductor market projected to expand within the decade, the need for scalable, file-level security has become more urgent than ever. Fasoo's proven solutions position the company to capture this expanding opportunity, enabling semiconductor innovators to accelerate product development while safeguarding the designs that define their competitive edge.

About Fasoo:

Fasoo provides unstructured data security, privacy, and enterprise content platforms that securely protect, control, trace, analyze, and share critical business information while enhancing productivity. Fasoo's continuous focus on customer innovation and creativity provides market-leading solutions to the challenges faced by organizations of all sizes and industries. For more information, visit <https://en.fasoo.com/>.
