SPRINGFIELD, MO, UNITED STATES, August 23, 2025 /EINPresswire.com/ --

Dr. Thomas Baggett, III and new associate Dr. Adolph Carlson Launch 417minis.com to Educate Patients on Minimally Invasive Dental Implants

Patients seeking a less invasive approach to tooth replacement now have a new online resource. Dr. Thomas Baggett, III, a general dentist with decades of clinical experience, has launched a redesigned website at 417minis.com to support individuals interested in [mini dental implants](#). The launch also highlights the addition of Dr. Adolph Carlson, a general dentist joining the practice, and reflects the office's designation as a Mini Dental Implant Center of America (MDICA).

The new site is focused on providing patients with accessible information about treatment options for replacing missing or unstable teeth, especially with mini dental implants, which offer a simplified approach for many individuals.

“

It’s an honor to meet so many incredible patients and help them transform their lives every day. We welcome you to our practice and look forward to your call.”

As a [Mini Dental Implant Center of America](#), the practice is part of a national group of dental offices committed to offering mini dental implants as a routine service. These implants are smaller in diameter than traditional implants and are designed as a single, solid piece that combines the implant post and attachment point into one structure.

Because mini implants do not have a separate abutment, they eliminate the small gap found in two-piece implant systems. This design feature helps reduce the chance of

bacterial buildup and lowers the risk of complications such as peri-implantitis, a condition that can cause inflammation and bone loss around the implant.

The minimally invasive approach and smaller implant size often allow for simpler placement, making mini dental implants an option for many patients who prefer a more efficient treatment process.

The new website at [417minis.com](http://417minis.com) features dozens of [educational videos](#) that provide clear

explanations of mini dental implants, the consultation process, and what patients can expect during and after treatment. Each video is designed to be concise and easy to follow.

Visitors can also watch a 30-minute informational video that offers a full overview of the treatment journey, including the differences between mini and traditional implants and how mini dental implants are placed.

This education-first approach reflects the practice's commitment to transparency, helping patients understand their options before making any decisions.

To help individuals explore their options for tooth replacement, the practice offers free consultations to patients in Springfield and nearby communities. During these visits, patients receive a full evaluation and can speak directly with Dr. Baggett or Dr. Carlson to discuss potential treatment plans.

The website also includes a 24/7 live chat service, allowing visitors to get real-time answers to questions and support with scheduling or using the site. This around-the-clock availability gives patients more flexibility when seeking information.

Dr. Adolph Carlson - Mini Dental Implants in Springfield, MO

- The single-piece design removes the joint between implant components, helping reduce bacteria buildup and simplifying care.
- The smaller diameter often allows for less invasive placement with reduced disruption to surrounding tissues.
- The placement process is typically faster and involves fewer appointments than traditional implants.
- Bone grafting is often not required, although in some cases it may still be recommended to support long-term success.
- Mini dental implants can be used to replace individual teeth, support dental bridges, or stabilize full dentures, offering flexibility for a wide range of needs.

Dr. Baggett and Dr. Carlson are both general dentists, and mini dental implants are a regular part of the care they provide. Their approach emphasizes conservative treatment planning, clear communication, and giving patients the tools they need to make informed decisions.

With a strong focus on education and accessibility, the practice aims to support each patient through every step of the treatment process in a comfortable and efficient manner.
