The increase in the adoption of social media & smartphones, the easy availability of GPS, and the emergence of location-based technology are boosting the growth of the global market. In addition, the increase in number of smartphone users and internet accessibility positively impact the growth of the market. However, the inflated cost of installation and maintenance and operational challenges are hampering the market growth. On the contrary, the growing penetration of 3G & 4G networks and the continuous increase in the number of internet users are expected to offer remunerative opportunities for the expansion of the location-based services market during the forecast period.

The assisted GPS (A-GPS) segment held the highest market share in 2021.

By technology, the assisted GPS (A-GPS) segment dominated the market in 2021, this dominance is primarily due A-GPS improves the accuracy and speed of determining a device's location by utilizing both satellite signals and network assistance from mobile carriers. This dual functionality makes A-GPS particularly effective in urban environments or areas with weak satellite signals, where traditional GPS might struggle. However, the others segment is expected to witness the largest of CAGR of 28.3%, this growth is driven by the increasing demand for precise indoor location tracking, especially in environments where GPS signals may be limited, such as inside buildings, malls, and airports. Enhanced cell ID provides improved accuracy for outdoor location tracking by utilizing cellular network towers, while Bluetooth low energy (BLE) is increasingly used for indoor positioning due to its low power consumption and ability to work effectively with beacons and other IoT devices.

The transportation and logistics segment held the highest market share in 2021.

By industry vertical, the transportation and logistics segment accounted for the largest share in 2021. This is due to the growing adoption of LBS technologies for fleet management, real-time vehicle tracking, route optimization, and supply chain visibility. Companies in this sector increasingly rely on location-based services to enhance operational efficiency, reduce costs, and ensure timely delivery of goods. However, the media and entertainment segment is expected to witness the largest CAGR of 29.2%. This growth is driven by the increasing use of location-based technologies for personalized content delivery, augmented reality (AR) applications, and location-targeted advertising. As streaming platforms, social media, and gaming increasingly incorporate geolocation features to enhance user engagement, the demand for LBS in this sector is rising.

Regional Insights: The North America region held the highest market share in 2021.

By region, the location-based services market was dominated by North America in 2021. This dominance is attributed to the widespread adoption of advanced technologies such as GPS, A-GPS, and bluetooth low energy (BLE), as well as the region's strong infrastructure for telecommunications and mobile networks. North America's leadership in sectors like transportation, logistics, and retail, where location-based services (LBS) play a crucial role in operations, also contributed to the market's growth.
