Prime determinants of growth

The portfolio management software market is expected to witness notable growth owing to an increase in demand for efficient asset management, technological advancements, and regulatory compliance and risk management. Moreover, an increase in demand for digital transformation is expected to provide a lucrative opportunity for the growth of the market during the forecast period. On the contrary, the cost and complexity of portfolio management software and data security concerns limit the growth of the portfolio management software market.

COVID-19 scenario

The COVID-19 pandemic had a moderate impact on the portfolio management software market size. As the pandemic disrupted global financial markets and caused uncertainty, many investors sought out portfolio management software to better track and manage their investments in volatile times. This led to a short-term boost in demand for these tools.

However, the economic fallout from the pandemic led to budget cuts in various sectors,

including financial services. Some firms reduced their spending on software, including portfolio management tools. Therefore, while the portfolio management software market experienced a temporary surge, its growth trajectory was influenced by the evolving economic conditions and the changing needs of businesses during and after the pandemic.

Rise in demand for efficient asset management is one of the primary drivers of the portfolio management software market. As more individuals and businesses seek to optimize their investments and assets, there is a growing demand for portfolio management software to help streamline the process and make informed decisions.

The solution segment to maintain its leadership status throughout the forecast period

Based on component, the solution segment held the highest market share in 2022, accounting for more than two-thirds of the global portfolio management software market revenue, and is estimated to maintain its leadership status throughout the forecast period. This is attributed to the increasing complexity of financial markets and the need for efficient asset allocation that has led to rising demand for sophisticated portfolio management tools. However, the service segment is projected to manifest the highest CAGR of 16.3% from 2023 to 2032. This is attributed to the need for tailored solutions and customization to meet individual client requirements which has led to a surge in consulting and advisory services.

Request Customization : <https://www.alliedmarketresearch.com/request-for-customization/A10393>

The on-premise segment to maintain its leadership status throughout the forecast period

Based on deployment mode, the on-premise segment held the highest market share in 2022, accounting for more than three-fifths of the global portfolio management software market revenue, and is estimated to maintain its leadership status throughout the forecast period. This is attributed to factors such as data security concerns and regulatory compliance requirements. However, the cloud segment is projected to manifest the highest CAGR of 17.9% from 2023 to 2032. The growth of the cloud segment in the portfolio management software market is primarily propelled by factors such as scalability, accessibility, and cost-efficiency.

The large enterprises segment to maintain its leadership status throughout the forecast period

Based on enterprise size, the large enterprises segment held the highest market share in 2022, accounting for nearly two-thirds of the global portfolio management software market revenue, and is estimated to maintain its leadership status throughout the forecast period. This is attributed to the need for real-time data analytics, decision support, and collaboration tools that are crucial for managing extensive portfolios efficiently. However, the small and medium-sized enterprises segment is projected to manifest the highest CAGR of 16.2% from 2023 to 2032. This is attributed to factors such as increasing competition, a desire for better financial management,

and cost-efficiency.

The business segment to maintain its leadership status throughout the forecast period

Based on end user, the business segment held the highest market share in 2022, accounting for more than two-thirds of the global portfolio management software market revenue, and is estimated to maintain its leadership status throughout the forecast period. This is attributed to the increasing complexity of investment landscapes and the need for efficient asset management. However, the individual segment is projected to manifest the highest CAGR of 17.8% from 2023 to 2032. This is attributed to the democratization of investment opportunities, the desire for personal financial empowerment, and technological advancements.

North America to maintain its dominance by 2032

Based on region, North America held the highest market share in terms of revenue in 2022, accounting for nearly two-fifths of the global portfolio management software market revenue, and is estimated to maintain its leadership status throughout the forecast period. This is attributed to the increase in complexity of financial markets and the growing emphasis on risk management and compliance in investment practices. However, Asia-Pacific is expected to witness the fastest CAGR of 17.7% from 2023 to 2032. This is attributed to the economic growth, the rising interest in investments, and the adoption of technology in the financial sector in this region.
