

# AppWork Launches Weather Intelligence for Work Orders Reducing Asset Risk

*AppWork launches Weather Intelligence, a tool to take real-time weather data at work order creation, reducing weather-related risk and prioritizing maintenance*

RAMSEY, NJ, UNITED STATES, August 28, 2025 /EINPresswire.com/ -- Developed in direct response to customer feedback, [Weather Intelligence](#) integrates real-time temperature and weather conditions into the work order

timeline. By removing the need for extra apps or manual data entry, it delivers immediate operational efficiency. The embedded snapshot strengthens claim documentation for weather-related incidents, supports confident on-site decision-making, and provides historical context that helps leaders improve long-term asset performance and establish a stronger, data-backed position in the event of claims.

“

We collaborated with AppWork to implement Weather Intelligence, a solution designed specifically to mitigate maintenance-related asset risk.”

*Rachel Palmer, CAO American  
Landmark*

## Compounding Benefits

- Operational efficiency – eliminates extra apps and manual data entry
- Claims defensibility – strengthens documentation for weather-related incidents with data captured at the time of work order creation
- Risk reduction – helps maintenance teams proactively manage weather-related challenges
- Strategic insight – delivers historical data for long-term asset performance decisions
- Work order prioritization – ensures resources are focused where they're needed most
- Intelligent diagnostics – pairs weather data with system insights for smarter decisions

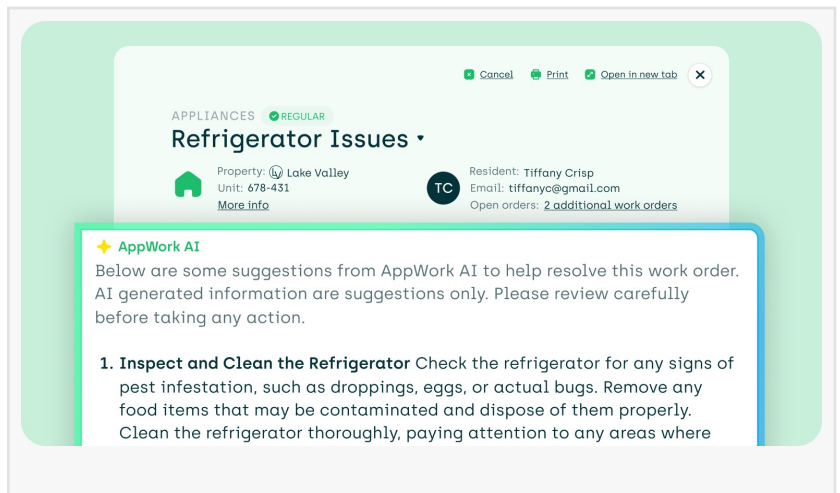

“We collaborated with [AppWork](#) to implement Weather Intelligence, a solution designed specifically to mitigate maintenance-related asset risk. This feature integrates real-time, time-stamped weather data directly into work orders, enabling our team to align responses with prevailing conditions. Now we can accurately prioritize genuine emergencies and allocate the

right teams and tools more efficiently.”

- Rachel Palmer, CAPS, Chief  
Administrative Officer of American  
Landmark

### How It Works

When enabled by a system  
administrator, AppWork automatically  
creates eligible work orders with an  
included time-stamped note that  
records outside temperature and  
weather conditions. Administrators can  
choose which Maintenance Categories use Weather Intelligence and adjust rules as needed.

### Availability

Weather Intelligence is available now for all current AppWork customers at no additional charge. For setup and best practices, contact your Customer Success Manager or visit the AppWork Help Center.

“Putting live weather data in the work order is an industry first that will have massive operational benefits and help reduce insurance premiums. Weather Intelligence helps your team prioritize true emergencies, intelligently diagnose the issue, work safer, and back up every decision with clear evidence.” said Sean Landsberg, CEO of AppWork.
