

Ultherapy® at Visage Laser & Skin Care: The Only FDA-Cleared, Non-Invasive Lift for Brow, Chin, Jawline, Neck, and Chest

Visage Laser & Skin Care offers Ultherapy®, the gold standard in non-surgical skin lifting—no needles, no downtime, real results.

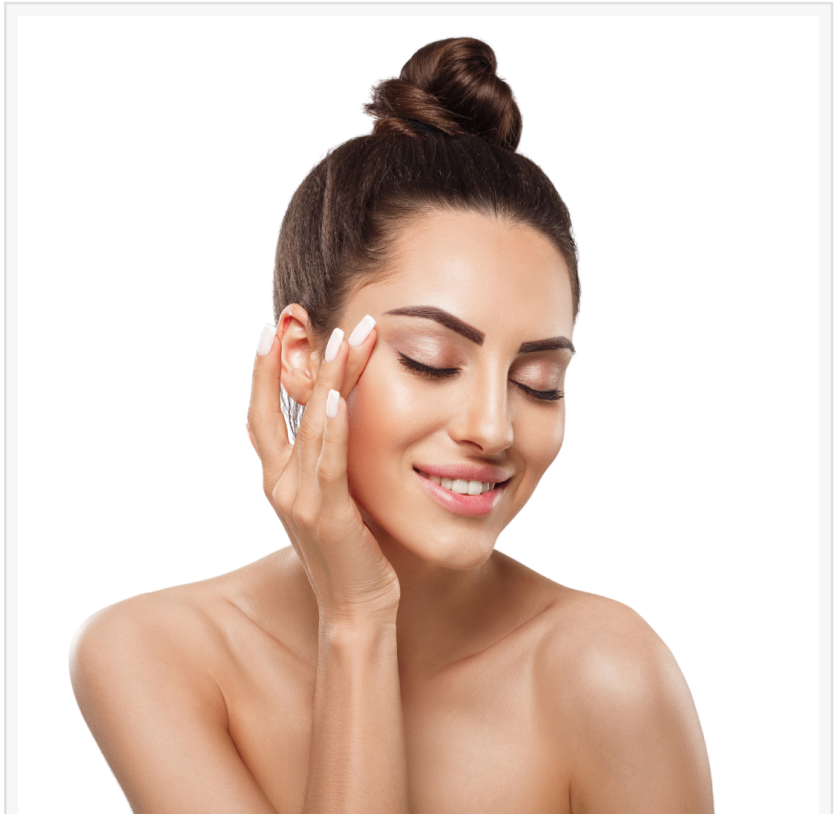

ANAHEIM HILLS, CA, UNITED STATES, September 3, 2025 /EINPresswire.com/ -- [Visage Laser & Skin Care](#), a leader in non-surgical aesthetic treatments, is renewing its spotlight on [Ultherapy®](#)—the only FDA-cleared, non-invasive procedure that lifts and tightens skin on the brow, chin, jawline, neck, and décolletage. Backed by proven results and real-time ultrasound technology, Ultherapy provides a safe, surgery-free option for those seeking natural-looking lift and improved skin tone, all without needles or downtime.

Using focused ultrasound energy, Ultherapy bypasses the skin's surface to stimulate collagen production deep within the tissue—resulting in gradual lifting, tightening, and firmer skin over time.

"Ultherapy is ideal for anyone seeking noticeable lift and firmness without the invasiveness or downtime of surgery," said Dr. Katarzyna Tesmer, Medical Director at Visage Laser & Skin Care. "It allows us to precisely target high-demand areas like the jawline, chin strap, neck, and brow—delivering natural-looking results that gradually improve over time."

Common Treatment Areas Include:

Chin strap and lower face contouring

A refreshed, youthful look—Ultherapy® delivers natural-looking skin lifting and firming with no surgery and no downtime.

Jawline definition and a tighter neck area

Brow lift and more open eyes

Chest rejuvenation (décolletage)

Overall firmer, youthful contours

What Clients Can Expect:

Ultherapy delivers ultrasound energy beneath the skin to jumpstart the body's natural collagen-building process. Most clients begin noticing improvement within a few weeks, with optimal results developing between 3 to 6 months. Because Ultherapy leaves the surface layer untouched, clients can resume their normal routines immediately after treatment.

Supported by the largest body of clinical data in its category and endorsed by leading aesthetic physicians, Ultherapy is widely recognized as the gold standard in non-surgical lifting. Real-time ultrasound imaging further ensures energy is delivered precisely where needed for safe, effective, and customized results.
