

Zaprite Announces Integration with COLDCARD Hardware Wallet for Bitcoin Payments and Cold Storage

TORONTO, ONTARIO, CANADA, September 9, 2025 /EINPresswire.com/ -- Zaprite, a Bitcoin-native payments and invoicing platform, announced integration with COLDCARD, a Bitcoin [hardware wallet](#) known for its air-gapped security model. The collaboration enables Bitcoin users to streamline the process of getting paid and moving funds into secure cold storage.

More freelancers, creators, and businesses are earning directly in Bitcoin. However, funds often remain in hot wallets, exchanges, or custodial services, exposing users to risks such as hacks, freezes, or surveillance.

“

Bitcoin companies working on open standards and interoperability is how Bitcoin moves forward”

NVK

Zaprite addresses this by providing a non-custodial payments platform where users can accept [Bitcoin payments](#) directly, generate invoices and payment links, manage recurring or one-off payments, and retain full control of their private keys.

COLDCARD complements this workflow by serving as a secure cold storage solution with features such as air-

gapped signing that keeps private keys offline, verifiable source code for independent review, dual secure elements for hardware-level protection, and a Bitcoin-only design.

With this integration, Zaprite users can receive Bitcoin directly to an address generated by COLDCARD. Payments land instantly without custodians or vendor lock-in, and funds can then be secured using COLDCARD’s PSBT workflows via NFC, MicroSD, or QR codes.

“Interoperability and open standards are essential for Bitcoin adoption,” said NVK, Co-Founder of

Coinkite. "This collaboration ensures that users can move from payment to cold storage with minimal friction."

"By integrating COLDCARD, our users get Zaprite's seamless payment experience paired with the security of self-custody. It's the perfect blend of convenience and sovereignty." — John Magill, Founder & CEO of Zaprite
