

Global Off-Highway Vehicle Lighting Market Valued at \$1.1 Billion in 2024, Projected to Hit \$2.3 Billion by 2034

WILMINGTON, NEW CASTLE, DE, UNITED STATES, September 5, 2025 /EINPresswire.com/ -- According to a new report published by Allied Market Research, titled, "[Off Highway Vehicle Lighting Market](#)", by Product Type (LED, Halogen, HID), by Application (Head Lamp, Tail Lamp, Work Light, Others), by Vehicle Type (Excavator, Loader, Crane, Dump Truck, Tractor, Others), by End-User (Construction, Agriculture)" The off-highway vehicle lighting market size was valued at \$1.1 billion in 2024, and is estimated to reach \$2.3 billion by 2034, growing at a CAGR of 8.3% from 2025 to 2034.

The off-highway vehicle lighting market is experiencing several key trends driven by technological advancements, safety regulations, and the growing demand for efficient off-road operations. One of the prominent trends is the shift toward LED lighting due to its energy efficiency, long lifespan, and brighter output compared to traditional lighting options like halogen or incandescent bulbs. LED lights are increasingly being used for various applications, including work lights, headlights, and hazard lights, as they provide superior illumination and durability in challenging conditions.

Alongside this, smart lighting solutions are gaining traction. These systems integrate sensors, connectivity, and advanced control mechanisms to adjust light intensity based on environmental conditions, improving visibility while reducing energy consumption. For instance, in April 2025, Stellantis partnered with Valeo to launch the first remanufactured LED headlamp and remanufactured infotainment display screen in Europe, reflecting a broader trend in the automotive and off-highway vehicle industries towards sustainability and cost-efficiency. By

focusing on remanufacturing, the companies are contributing to the growing demand for energy-efficient LED lighting solutions in off-highway vehicles, providing a more sustainable option for operators of construction, agricultural, and mining vehicles.

Moreover, the focus on safety and compliance is driving the development of lighting systems that increasingly meet industry standards and enhance operator visibility, ensuring safer and more efficient operations. With the increase in complexity of off-highway vehicle operations, there is a growing emphasis on meeting safety standards and ensuring maximum visibility in low-light environments. As a result, off-highway vehicle lighting systems are being designed to meet specific industry regulations and improve operator safety, particularly in construction, mining, and agriculture. In addition, the rise of automation and electrification in off-highway vehicles is driving the development of lighting systems that are optimized for electric and autonomous machinery. For instance, in October 2024, Kia launched the electric EV9 and modular PV5 concepts, both featuring rugged off-road-style lighting elements, highlighting a crossover of design trends from the off-highway vehicle lighting industry, where durable, high-visibility lighting is essential for performance and safety in demanding environments. Moreover, there is a growing demand for rugged, weather-resistant lighting that can withstand extreme conditions such as rain, snow, and high vibrations, ensuring reliability in remote and harsh environments. These rugged, weather-resistant lighting highlight the global off-highway vehicle lighting market shift toward safer, more efficient, and technologically advanced lighting solutions for off-highway vehicles.

By Vehicle Type, the tractor segment attained the highest market share in 2024. This dominance is driven by the extensive use of tractors in agriculture, where operations often extend into early morning or late evening hours, requiring reliable and high-performance lighting. Tractors operate in varied terrain and weather conditions, making durable, energy-efficient lighting systems essential for safety and productivity. The growing adoption of LED lights for better visibility, lower energy consumption, and longer lifespan has further fueled demand for off-highway vehicle lighting market share.

By End User, the construction segment attained the highest market share in 2024 in off-highway vehicle lighting market forecast. This is primarily due to the rise in demand for enhanced visibility and safety during round-the-clock operations. Construction sites often operate in low-light or harsh environmental conditions, making reliable and durable lighting essential for productivity and operator safety. The growing focus on workplace safety regulations and the need for energy-efficient, long-lasting lighting solutions have led to increased adoption of LED lighting systems in construction equipment. Infrastructure development projects in emerging economies have further boosted the demand for advanced lighting systems in construction vehicles and machinery.

By Region

Region wise, North America attained the highest market share in 2024 and emerged as the leading region in the off-highway vehicle lighting market size. This is due to the region's strong presence of key industries such as construction, agriculture, and mining, which heavily rely on off-highway vehicles. The demand for advanced lighting systems is high due to the need for safety, extended work hours, and challenging operational environments. The widespread adoption of LED technology, increased investment in infrastructure development, and the presence of major manufacturers have fueled market growth. Regulatory standards promoting worker safety have also driven the adoption of high-performance lighting solutions.

However, Asia-Pacific is projected to grow at the fastest rate during the forecast period in off-highway vehicle lighting market analysis. This due to rapid industrialization, infrastructure development, and expansion of the agriculture and construction sectors. Countries such as China, India, and Southeast Asian nations are witnessing increased use of off-highway vehicles, boosting the demand for reliable lighting systems. The shift toward LED and smart lighting technologies is gaining traction due to their energy efficiency and durability. Rise in safety awareness, growing mechanization in agriculture, and government investments in mining and infrastructure projects are contributing to the strong market growth across the region.

Key Takeaways

On the basis of product type, the LED segment held the largest share in the Off-highway vehicle lighting industry in 2024.

By application, the head lamp segment was the major shareholder in 2024.

By service type, the freight forwarding segment dominated the market, in terms of share, in 2024.

By vehicle type, the tractor segment dominated the market, in terms of share, in 2024.

By end-user, the construction segment dominated the market, in terms of share, in 2024.

Region wise, Asia-Pacific region held the largest market share in 2024.

The key players operating in the global Off-highway vehicle lighting market include Valeo, HELLA GmbH & Co. KGaA, truck-lite co., llc, WESEM, APS Lighting and Safety, Grote Industries, J.W. Speaker Corporation, Peterson Manufacturing Co., hamsar diversco inc., and ECCO Safety Group. They have adopted strategies such as contracts, agreements, acquisition, and product launch to

improve their market positioning.

About Us :

Allied Market Research (AMR) is a full-service market research and business-consulting wing of Allied Analytics LLP based in Wilmington, Delaware. Allied Market Research provides global enterprises as well as medium and small businesses with unmatched quality of "Market Research Reports" and "Business Intelligence Solutions." AMR has a targeted view to provide business insights and consulting to assist its clients to make strategic business decisions and achieve sustainable growth in their respective market domain.

We are in professional corporate relations with various companies, and this helps us in digging out market data that helps us generate accurate research data tables and confirms utmost accuracy in our market forecasting. Each and every data presented in the reports published by us is extracted through primary interviews with top officials from leading companies of domain concerned. Our secondary data procurement methodology includes deep online and offline research and discussion with knowledgeable professionals and analysts in the industry.
