

6.9% CAGR UHT Processing Market to generate \$5.7 billion by 2030

Increase in demand for edible products with higher shelf lives, rise in demand for milk & dairy products & growing adoption UHT techniques for new food products

WILMINGTON, DE, UNITED STATES, September 9, 2025 /EINPresswire.com/ -- [UHT processing market size](#) was estimated at \$3.0 billion in 2020 and is expected to garner \$5.7 billion by 2030, registering with a CAGR of 6.9% from 2021 to 2030.

Increase in demand for edible products with higher shelf lives, rise in demand for milk and dairy products, and growing adoption UHT techniques for new food products fuel the growth of the global UHT processing market. On the other hand, availability of various substitutes restrains the growth to some extent. However, surge in demand for safer products due to COVID-19 and integration of artificial intelligence in UHT machinery are expected to create multiple opportunities in the future.

UHT processing will gain high traction for products apart from regular milk such as cream, custard and flavored milks. Furthermore, demand for shelf stable products to further enhance adoption of UHT processing.

Milk and milk products are some of the most preferred and consumed food products all across the world. Increase in demand for milk and milk products among consumers is leading to rise in adoption of UHT machines and the UHT processing market trends. Milk contains multiple nutrients besides calcium, including vitamins B & D, phosphorus, and potassium, which are essential for humans. However, treatment of milk is essential, as it contains inherent bacteria and microorganisms that can cause health issues if consumed in raw state. Similarly, many milk products such as cheese, yogurt, curd, flavored milk, and cottage cheese need to undergo a

similar kind of processing to make them suitable for consumption. As UHT eliminates all of the bacteria and microorganisms in the milk without having any major effects in the nutrients, the process is being widely adopted for treatment of milk and milk products. Thus, with rise in demand for dairy products, the adoption of UHT processing is likely to witness increased demand, thus leading to market proliferation.

Besides UHT milk, different types of milk are available in the market such as pasteurized milk and fresh milk. Same is the case of many other types of products that make use of UHT, enabling UHT processing market growth. Availability of alternatives poses challenge for the UHT processed products. Pasteurization of milk is being done since the year 1862. Many European countries still prefer the use of pasteurized milk over UHT milk, thus reducing the UHT processing market demand in the region. Their climatic condition makes it so that they do not have the need for products with long shelf lives. Similarly, in many Asian countries, consumers prefer to get raw milk every day and then boil at their homes before drinking. Soups, broths, and stews and are available in canned forms, which are helpful in prolonging the life of these products. Thus, presence of alternatives to prolong shelf life is expected to restrain the growth of the UHT processing market.

Based on region, the market across Asia-Pacific held the lion's share in 2020, garnering around two-fifths of the global market. The same region is also expected to cite the fastest CAGR of 8.8% by the end of 2030. The other provinces studied in the report include North Europe, Europe, and LAMEA.
