

Installers of Starlink Rolls Out Nationwide Starlink Assessments and Installation Services

Installers of Starlink (877) 309-1050 offers standardized assessments, installation, and validation nationwide; commercial, residential, maritime & mobile.

AUSTIN, TX, UNITED STATES, September 9, 2025 /EINPresswire.com/ -- [Installers of Starlink](#) today announced a [nationwide Starlink installation](#) program that standardizes its site assessments and installation methods for commercial, residential, mobile, and maritime deployments across all 50 U.S. states. The initiative is designed to help organizations select the appropriate Starlink system, mount, and network design prior to on-site work, with documented results at hand-off.

“

With 700+ installers nationwide, we can move fast. Multi-site customers like getting all locations online in days—and keeping work running the whole time.”

a company spokesperson

Installers of Starlink (877) 309-1050 — Nationwide Starlink Assessments & Installation

Under the program, technicians conduct virtual and on-site assessments that review line-of-sight, roof or pole suitability, wind and load factors, cable paths, power and grounding, and Wi-Fi coverage. Recommendations are presented in plain language with side-by-side comparisons of systems—including Standard Gen2/Gen3, Mini, Flat High Performance, and Performance Gen3—so stakeholders understand trade-offs in throughput, latency, durability, and long-term maintenance before installation begins.

The company’s methods and checklists emphasize safety

and verifiable outcomes. Each job includes weather-sealed terminations, strain relief and drip loops, and measured performance validation. Installers of Starlink offers custom mounting for complex structures (including rounded metal roofs) and maintains a photo library of comparable, completed projects that can be shared during planning to help teams visualize results. All field personnel carry a minimum of \$1 million liability insurance, and each installation

is backed by a one-year workmanship guarantee. Regional practices—such as corrosion resistance, UV exposure, wind load, and snow/ice considerations—are addressed in the site plan to ensure hardware stands up to local conditions.

Post-installation, customers receive complimentary technical support during normal business hours for 90 days. For organizations that require broader support, optional services are available via KVH, including 24/7/365 technical support and account management, lump-sum consolidated billing across locations, and expedited equipment logistics—with typical two-day equipment delivery where available. Equipment is sold and fulfilled by KVH, not Installers of Starlink. Installation services are available with or without KVH involvement.

To promote clarity and reduce procurement delays, Installers of Starlink has published baseline pricing for planning purposes: residential installations start at \$500 in most U.S. markets; commercial installations start at \$899, or from \$750 per site for projects with three or more locations. The company notes that simple scopes may price lower, and any travel or complexity-related fees are disclosed in writing before payment. Final proposals reflect site conditions and stakeholder requirements.

Beyond single-site projects, the program supports multi-location rollouts with coordinated scheduling and standardized documentation, including photos, mount details, and measured performance. Where organizations run fiber or SD-WAN, Installers of Starlink can integrate Starlink for resiliency; for yards and outbuildings, teams design coverage using point-to-point bridges and appropriately sized access points.

“We’re third-party installers, and it’s rewarding to help Starlink reach more people,” a company spokesperson said. “The equipment performs, the service keeps improving, and—unlike many legacy providers—there’s a clear focus on affordability.”

Availability

Coverage is nationwide, and the same documented assessment, installation, and verification methods apply in every market; Texas is covered statewide—from El Paso to Beaumont and from the Panhandle to the Valley.

About Installers of Starlink

Installers of Starlink provides Starlink assessments, installation, and network integration across the United States. The company’s program centers on clear planning, documented workmanship, and verified performance, with optional post-installation services available via KVH.
