

AV-Comparatives to Showcase Enterprise-Focused EPR and EDR Testing alongside Gartner Security & Risk Management Summit

Driving Evidence-Based Insight into Enterprise Cyber Defence through Real-World Prevention, Detection, and Response Testing

INNSBRUCK, LONDON, UNITED KINGDOM, September 16, 2025 /EINPresswire.com/ -- [AV-Comparatives](#) is proud to announce its participation in the Gartner Security & Risk Management Summit in London, 22–24 September 2025. As the cybersecurity community gathers to address evolving threats and digital risk strategies, AV-Comparatives brings a spotlight to one of the most pressing areas in enterprise defence: the real-world efficacy of Endpoint Prevention and Response ([EPR](#)) and Extended Detection and Response (EDR) technologies.

With targeted attacks increasingly bypassing traditional defences, effective prevention, detection, and response mechanisms have become business-critical. AV-Comparatives has responded by launching some of the most comprehensive and technically demanding EPR/EDR evaluations in the industry.

“

Our EPR and EDR testing provides enterprise clients with unmatched visibility into how solutions perform under realistic, multi-stage attack scenarios, including breach simulation and red teaming.”

Jan Brilke, COO of AV-Comparatives

“Our EPR and EDR testing provides enterprise clients with unmatched visibility into how solutions perform under realistic, multi-stage attack scenarios, including breach simulation, telemetry analysis, and anti-tampering resistance,” said Jan Brilke, COO of AV-Comparatives.

Key highlights of AV-Comparatives’ 2025 Enterprise Testing Programme include:

Enterprise Endpoint Prevention and Response (EPR) Test: A full attack-chain evaluation measuring both prevention and response capabilities, total cost of ownership, and

operational impact across 50 targeted attacks. The latest EPR Test Report will be released publicly on 22nd September 2025. Vendors included: Bitdefender, Check Point, CrowdStrike, Elastic, ESET, Fortinet, G Data, Kaspersky, Palo Alto Networks and VIPRE. 2 vendors failed

certification.

These Red/Blue/Purple Team-style tests go far beyond static detection benchmarks, offering practical insight for CISOs, analysts, and enterprise decision-makers tasked with building cyber resilience.

Jan Brilke (coo) and Peter Stelzhammer (co-founder) will attend the summit and are available for in-person meetings to discuss these initiatives. "We look forward to exchanging insights with cybersecurity leaders and demonstrating how our EPR/EDR testing is helping enterprises validate their defences in the most critical areas," Brilke added.
