

# InstantGMP is proud to announce its recognition as the #2 ranked solution on GoAudits' Top 5 GMP Software in 2025 list.

CARY, NC, UNITED STATES, September 22, 2025 /EINPresswire.com/ -- InstantGMP™, a leading provider of manufacturing and quality management solutions for regulated industries, is proud to announce its recognition as the #2 ranked solution on GoAudits' Top 5 GMP Software in 2025 list.

Published by GoAudits, a global leader in inspection and audit technology, the article highlights the top solutions helping manufacturers achieve and

maintain compliance with Good Manufacturing Practice (GMP) standards. InstantGMP was recognized for its user-friendly design, affordability, and all-in-one platform that brings together manufacturing process software, manufacturing inventory software, and quality management tools to simplify compliance for small to mid-size enterprises.

InstantGMP All-In-One Manufacturing & Quality System

“

Being recognized by GoAudits as one of the best GMP software platforms is a testament to our team's dedication to helping customers stay GMP compliant while streamlining their operations.”

*Dr. Richard Soltero*

“We built InstantGMP to make it easier for manufacturers to focus on quality without being overwhelmed by compliance,” said Dr. Richard Soltero, President of InstantGMP. “Being recognized by GoAudits as one of the best GMP software platforms is a testament to our team's dedication to helping customers stay GMP certified while streamlining their operations.”

GoAudits highlighted InstantGMP for its ability to centralize manufacturing data, documentation, and training in one secure, cloud-based system. Designed specifically for regulated environments, the platform gives teams control

over every stage of production, from planning and raw material receipt to finished product

release.

InstantGMP helps companies:

- Create, produce, and track master batch records (MBR) and batch production records (BPR), also referred to as batch manufacturing records, using built-in [electronic batch record software](#) that ensures accuracy, consistency, and data integrity.
- Use manufacturing inventory software to trace, monitor, and record inventory from raw ingredient ordering through final production, giving teams real-time visibility and preventing stock issues.
- Manage deviations, investigations, and verification of raw materials and finished products to maintain high quality and compliance.
- Store, review, update, and approve production files, records, and videos securely to reduce the risk of errors and improve audit readiness.
- Track employee training and certifications to ensure teams remain qualified and regulatory-ready.

Because these modules are integrated into one manufacturing process software platform, InstantGMP eliminates the inefficiencies of juggling multiple disconnected tools. The result is faster production, fewer errors, and a stronger foundation for compliance. These are all especially important for highly regulated operations like 503B compounding pharmacies, pharmaceutical manufacturers, biotech firms, and dietary supplement producers.

One of the platform's biggest advantages is how it simplifies documentation and quality oversight. Instead of relying on spreadsheets or paper-based systems, manufacturers can manage the entire lifecycle of a batch digitally, starting with MPR planning and carrying through to the execution and approval of each batch record.

This centralized approach gives teams a single source of truth for every production detail, making it easier to stay organized, audit-ready, and in full control of operations.

"Manufacturers tell us they can finally breathe easier during audits," added Dr. Soltero. "They know their GMP software is capturing everything they need, from training and inventory data to every step of each batch manufacturing record, in a way that is easy to review, approve, and defend."

To see how InstantGMP can help your team create master batch records, manage inventory, and stay GMP certified, schedule a demo today.

About InstantGMP™, Inc.

Founded by pharmaceutical industry veteran Dr. Richard Soltero, InstantGMP, Inc., offers affordable all-in-one manufacturing, inventory, and quality software. The company develops

cloud-based electronic batch record software and standard operating procedures specific to industries that are required to follow FDA manufacturing regulations and Good Manufacturing Practices ("GMP").

As a manufacturing software company, InstantGMP™ pioneered accessible, easy-to-use electronic batch record software for products manufactured using GMPs. The Company's updated software simplifies the documentation and approval procedures for quality processes that keep all quality documentation organized in electronic format while providing for quality checks and workflow processes to make compliance with FDA requirements easy.
