

KFSHRC Expands Artificial Intelligence Applications Across Clinical and Research Fields

RIYADH, SAUDI ARABIA, September 24, 2025 /EINPresswire.com/ -- King Faisal Specialist Hospital & Research Centre (KFSHRC) has announced the implementation of more than 30 artificial intelligence (AI) solutions designed to support clinical documentation, medical translation, and advanced data analysis. Five new AI agents were introduced in 2025, continuing the hospital's focus on digital innovation.

The Centre for Healthcare Intelligence (CHI), established in 2019, has deployed over 20 AI-powered applications across diagnostics, patient-flow management, and predictive care. These include radiology tools for chest X-rays and brain CT scans, as well as automated systems that monitor patient experience in real time.

Dr. Björn Zoëga, Deputy CEO of KFSHRC, stated that the hospital's approach is to integrate AI as a supportive tool for healthcare professionals. "Artificial intelligence must be used responsibly to reduce workloads, improve accuracy, and enhance safety," he said.

Professor Ahmad AbuSalah, Director of the Digital Innovation Hub, added that the hospital's strategy is built on governance, innovation culture, and staff empowerment. "This ensures that the solutions developed are sustainable and reliable," he explained.

As part of its international engagement, KFSHRC is participating in the C3 Davos of Healthcare™ Japan Summit to share insights on digital transformation and the measurable outcomes of AI adoption.
