

Strymon Introduces New 32 Voice SuperKar+ Eurorack Sound Module

The most powerful Karplus-Strong voice module ever is announced for the Eurorack format

WESTLAKE VILLAGE, CA, UNITED STATES, September 30, 2025 /EINPresswire.com/ -- Strymon Engineering (www.strymon.net), the Los Angeles-based manufacturer of premium products for musicians, today announced the release of the new SuperKar+ voice module for the Eurorack format. Featuring two independent 16-voice Karplus-Strong synth engines capable of generating string, tubular or percussive textures, a host of powerful features, and CV inputs to control the most relevant performance parameters, SuperKar+ is ready to be the center of any Eurorack setup.

The New Strymon SuperKar+

“

The 32 voices of polyphony, real-time control and wide range of textures make tweaking sounds a real joy.”

Pete Celi - Strymon DSP guru and co-founder

Housed in a slim 12HP chassis that belies the power under the hood, SuperKar+ is the most advanced module ever based upon Karplus-Strong synthesis, giving users access to a host of plucked, bowed, blown or tapped textures at the push of a button. The Chord voice can create a vast array of smart harmonies based upon its CV input, and the Solo voice can be controlled by both CV and MIDI. Independent CV inputs for the most relevant sound-shaping characteristics are provided for both voices,

offering powerful real-time control of parameters like pitch detune, damping, decay, attack, number of voices and more.

“I’ve wanted to expand the initial research we did for Starlab to create a full-featured Karplus-Strong module for a while now”, said Pete Celi, chief DSP guru and Strymon co-founder. “I’m

really pleased with how it came out - the 32 voices of polyphony, real-time control and wide range of textures available make tweaking sounds a real joy”.

Celi continues, “It was important that SuperKar+ be both powerful and easy to use, so we made sure that the user interface is simple to understand at a glance. The deeper you go into modulating the performance via CV the more expressive the music can be, which makes the experience of using it truly inspiring.”

The SuperKar+ Eurorack voice module is available now directly from Strymon and from dealers worldwide for \$399 US.

Videos covering the launch can be found at <https://www.strymon.net/product/superkarplus> and on Strymon’s YouTube channel.
