

# Citrus Fiber Market Statistics 2023-2032: Industry Trends and Growth Opportunities

*Rise in demand for fiber supplements and numerous health benefits associated with citrus fibers drive the growth of the global citrus fiber market.*

WILMINGTON, DE, UNITED STATES, September 29, 2025 / EINPresswire.com/ -- [Citrus fiber market size](#) was pegged at \$390.6 million in 2020, and is expected to generate \$659.2 million by 2030, growing with a CAGR of 5.5% from 2021 to 2030.

Rise in demand for fiber supplements and numerous health benefits associated with citrus fibers drive the growth of the global citrus fiber market. However, variable standards and guidelines across regional regulatory bodies and unhealthy effects of excess consumption of fiber impede the growth to some extent. On the contrary, shift in preference for plant-based foods and rise in demand from developing economies are anticipated to pave the way for multiple opportunities in the industry.

The global citrus fiber market is poised for substantial growth in the coming years, driven by increasing consumer demand for natural and clean label food products. Its versatile applications in food and beverage industries, coupled with its potential as a sustainable ingredient, make citrus fiber a key player in the evolving food industry landscape.

Citrus fiber, also known as citrus pulp or citrus peel fiber, is a natural dietary fiber derived from the waste byproducts of citrus fruit processing, primarily from the peels of oranges, lemons, and other citrus fruits. It is a valuable ingredient in the food industry due to its unique functional properties. Citrus fiber is rich in soluble and insoluble fiber, offering numerous health benefits such as improved digestive health, reduced cholesterol levels, and blood sugar regulation. This fiber helps in smooth bowel movement. There are numerous health benefits associated with

consumption of citrus fibers that play an important factor to drive the global citrus fiber market growth. These fibers help to prevent certain diseases such as irritable bowel syndrome (IBS), heart disease, type 2 diabetes, high cholesterol levels, high blood sugar levels, and obesity.
