

NeoSapien, Inc. Unveils LapTouch™ — World's First Touch Sensor for MacBooks

LapTouch™ - the New Touchscreen device designed for Mac is accepting limited Pre-Orders on Kickstarter prior to 2026 Public Release

MIAMI, FL, UNITED STATES, October 1, 2025 /EINPresswire.com/ -- NeoSapien Unveils [LapTouch™ — The Plug & Play Device That Finally Gives MacBooks Touchscreen](#)

We harness the invisible and achieved the impossible. LapTouch™ finally gives MacBook users the touchscreen experience that Apple never offered.”

Phillip Cantore

After 4 years of R&D, NeoSapien, Inc. (D/B/A Toad Tech) has announced the launch of LapTouch™, a plug-and-play device that transforms any MacBook into a responsive touchscreen.

With LapTouch™, MacBook users can tap, swipe, scroll, rotate, and pinch just like they would on a tablet — all

without giving up the Mac experience they love. Each first-edition unit will be manufactured in the USA and personally signed by the founder, making it a collector’s release for early backers.

The concept traces back to 2018, when the founders exclusively distributed AirBar™, a similar plug-and-play device that added touch capability to Windows laptops. But unlike Windows devices, Apple has never released a touchscreen MacBook — leaving millions of users without the option.

After more than four years of R&D and design breakthroughs, NeoSapien has solved the problem. Unlike conventional capacitive touchscreens, LapTouch™ projects an invisible light field across the MacBook display, turning it into a responsive, gesture-based surface. The result is a lightweight, low-power, highly versatile experience that works not only with fingers but also with gloves, paintbrushes, or just about any object.

The best part: it doesn't require any modifications and it does not void any of Apple's warranties. The breakthrough for 2026 is that users don't even need to touch the screen at all. LapTouch™ can detect and respond to "air gestures" at a distance, unlocking futuristic ways of interacting with a MacBook that even iPads can't replicate.

Setup is effortless: simply plug LapTouch™ into a MacBook's USB port when needed, and remove it when not in use.

[Phillip Cantore, Founder & CEO of NeoSapien, Inc. said:](#) "Over the years Macbook users kept asking us for a touchscreen solution, Neonode never made one with AirBar™ — and Apple has never offered it. We got tired of hearing it, so we made it ourselves. With LapTouch™ here, the wait is finally over. Now more than 100 million MacBook owners worldwide can experience their laptops in an entirely new way. Adding a new dimension of interactivity to the already amazing Mac experience"

LapTouch™ is now available for pre-order on Kickstarter — with early-backer discounts, exclusive perks, and limited collector's editions for first supporters.

[Founded in 2018, NeoSapien, Inc. \(formerly Toad Tech Corp\)](#) is a product innovation

company with roots in pioneering devices like the AirBar™, the company's mission is to democratize useful technologies and bring fresh, disruptive ideas to the mass-market for the average consumer.
