Goat milk is the type of milk which is white, opaque liquid with a slightly sweet taste and no odor and has various health benefits. The report includes different product categories of goat milk such as milk, cheese, milk powder, and others. The milk by product type is anticipated to witness substantial growth owing to its health benefits, which increases its popularity among the health-conscious population.

In a past decade, people are much aware about their health and fitness. Goat milk provides 9 grams of protein, 10 grams of fat, and 330 milligrams of calcium per cup than any cattle milk or plant-based milk. It is rich source of fatty acids, calcium, and contains low level of cholesterol. Goat milk is considered as a great alternative to cow's milk as it is easier to digest, less inflammatory, and has lesser number of allergens. It also enhances ability of human body systems to absorb important nutrients from other foods. It contains A2 casein, which does not cause inflammation hence, majority of market players prefer goat milk powder to produce infant formula. These health benefits responsible to increase goat milk market share. However, high cost of the goat milk and its products and increase in number of vegan people are expected to hamper the growth of the market. On the contrary, technological innovation in the dairy processing equipment and aggressive marketing strategies are expected to supplement the goat milk market growth in future.
