

DevSecOps as a Service Enables Faster Compliance and Safer Cloud Deployments in the U.S.

DevSecOps as a Service enables U.S. enterprises to automate security, accelerate software delivery, and maintain compliance across cloud & development pipelines

MIAMI, FL, UNITED STATES, October 6, 2025 /EINPresswire.com/ -- Across the United States, DevSecOps Service is emerging as a strategic priority as companies face heightened cyber risks and rigorous regulatory standards. By embedding security into the software development pipeline, organizations shift it from a technical concern to a strategic asset. Utilizing end-to-end [DevSecOps as a Service](#) offerings, businesses can introduce automated security validations, accelerate release schedules, cut costs associated with late-stage defect remediation, and ensure compliance. The growth of cloud-native and containerized applications further reinforces this trend, with many enterprises partnering with specialized providers to optimize the transition. In today's digital economy, DevSecOps as a Service is vital for protecting brand trust and sustaining competitiveness.

IBN Technologies: Expert in Outsourced Finance and Accounting Services

This development reflects a fundamental change in how enterprises view security as a growth enabler rather than an afterthought. By leveraging end-to-end DevSecOps as a Service offerings, businesses can maintain innovation velocity while embedding strong security controls, supporting digital transformation without compromising agility. Companies like IBN Technologies are leading this charge, guiding organizations to implement the first practices that comply with regulations and meet market expectations. With cyber risks escalating, DevSecOps as a Service adoption is becoming a critical pillar of sustainable growth and organizational

stability.

Closing Critical Security Gaps Through DevSecOps

Today's software development teams face urgent challenges that threaten speed, compliance, and security:

- Security tools operating in silos, reducing visibility
- Manual compliance reviews slowing release cycles and increasing audit risk
- Developer resistance to security measures seen as bottlenecks
- Lack of expertise to manage devsecops startups processes effectively
- Integration challenges with Infrastructure as Code and SAST in CI/CD pipelines

Addressing these issues requires embedding security directly into development pipelines. Secure DevOps empowers organizations to eliminate tool fragmentation, simplify compliance, support development teams, and fill skills gaps—turning security into a catalyst for innovation rather than an obstacle.

Resilient DevSecOps Pipelines for Secure Software Delivery

As organizations embrace digital transformation, integrating security directly into development pipelines is critical. DevSecOps as a Service ensures security is continuous and automated throughout the software lifecycle. By embedding thorough security practices, enabling automated compliance, and equipping developers with the proper tools and workflows, businesses can achieve faster, safer software delivery while mitigating risk and maintaining regulatory compliance.

☐ Shift-Left Security & DevSecOps Automation

Automate SAST, SCA, DAST, and IaC scanning across CI/CD pipelines to detect vulnerabilities early and efficiently.

☐ Secure Infrastructure-as-Code

Strengthen cloud infrastructure with best practices and hardened implementations for Terraform, ARM, and AWS CloudFormation.

☐ Developer-First Enablement

Provide developers with practical training, PR gating, and defined triage workflows for smooth integration of security.

☐ Continuous Compliance

Automate regulatory compliance for SOC 2, ISO 27001, GDPR, and HIPAA, ensuring continuous evidence collection for audits.

Client Success: Driving Secure, Agile Software Delivery

Adoption of DevSecOps as a Service is enabling organizations to accelerate delivery while embedding security seamlessly into the software lifecycle.

- A leading financial services company modernized its development processes by adding automated security tests, continuous monitoring, and compliance verification into its CI/CD pipelines.
- This transformation cut release times by 30%, decreased early-stage vulnerabilities by 40%, and allowed teams to innovate with confidence while maintaining robust security.

Building Resilient Software Pipelines with DevSecOps

As enterprises accelerate digital initiatives, secure, compliant, and agile software delivery is increasingly vital. The top devsecops companies' market, projected to grow from \$6.59 billion in 2022 to \$23.5 billion by 2032, highlights the widespread need for integrated security across industries. Cloud adoption, complex cyber threats, and automation are prompting organizations to adopt new development strategies.

IBN Technologies' developer-focused DevSecOps as a Service platform addresses these challenges by delivering cloud-native security, continuous compliance, and production-ready code. Through Policy as Code, Infrastructure-as-Code scanning, SAST, and automated evidence collection, the platform ensures operational efficiency, audit readiness, and risk reduction, enabling teams to innovate confidently.

By including security and compliance at every stage of development, organizations can effectively manage cyber risks and regulatory demands. Automated, developer-centric workflows turn security into a strategic enabler, supporting secure growth, operational resilience, and long-term competitive advantage. Partnering with experienced devsecops vendors ensures organizations achieve these outcomes efficiently and sustainably.

About IBN Technologies

[IBN Technologies LLC](#) is a global outsourcing and technology partner with over 26 years of

experience, serving clients across the United States, United Kingdom, Middle East, and India. With a strong focus on Cybersecurity and Cloud Services, IBN Tech empowers organizations to secure, scale, and modernize their digital infrastructure. Its cybersecurity portfolio includes VAPT, SOC & SIEM, MDR, vCISO, and Microsoft Security solutions, designed to proactively defend against evolving threats and ensure compliance with global standards. In the cloud domain, IBN Tech offers multi-cloud consulting and migration, managed cloud and security services, business continuity and disaster recovery, and DevSecOps implementation—enabling seamless digital transformation and operational resilience.

Complementing its tech-driven offerings, IBN Tech also delivers Finance & Accounting services such as bookkeeping, tax return preparation, payroll, and AP/AR management. These are enhanced with intelligent automation solutions like AP/AR automation, RPA, and workflow automation to drive accuracy and efficiency. Its BPO Services support industries like construction, real estate, and retail with specialized offerings including construction documentation, middle and back-office support, and data entry services.

Certified with ISO 9001:2015 | 20000-1:2018 | 27001:2022, IBN Technologies is a trusted partner for businesses seeking secure, scalable, and future-ready solutions.
